To Whom It May Concern,

I recently purchased and installed a SureSeal In-Line Waterless Trap Protection Device - a product which conforms to the ASSE 1072 standard. I have found it to be a great solution to my floor drain odor problems. The Trap Seal Protection Devise worked effectively stopping sewer gases and odors from coming through my floor drains. It was very easy for me to install and saved a lot time and expense.

I understand that the plumbing code does not currently recognize the new ASSE 1072 standard for Trap Seal Protection Devices. As the code approval effectively controls what types of devices can be used in new construction; I ask that you take my opinion into consideration on this matter.

I found using a Trap Seal protection devise which conforms to the ASSE 1072, to be a superior solution over the traditional water based alternatives. I believe that ASSE 1072 standard is a major advancement in plumbing systems and I support its adoption into the plumbing code. I urge you to support the inclusion of the ASSE 1072 into the plumbing code. I believe this new standard to a better alternative to traditional methods - that are expensive, labor intensive, and disruptive.

I thank you for taking action on this matter.

Sincerely,

Martin Throne

Mr. Rick Ensley

Sure Seal

1614 South Mildred suite 12

Tacoma, WA 98465

Dear Mr. Ensley,

Thank you for showing us and installing your Sure Seal device in our floor drains.

As I told you we have had a long term problem with odors from these drains.

The Sure Seal device seems to have made quite a difference in controlling odors from the floor drains and has not impaired the drain flow.

Thank you!

Sincerely,

Carl Durham, CBO

To Whom It May Concern,

Our organization would like to express gratitude to those responsible for establishing the ASSE 1072 standard which addresses Trap Seal Protection Devices. We've had ongoing issues with sewer odors from our floor drains. In our experience traditional trap primer options do not prove reliable over time. Prior to the establishment of the ASSE 1072 standard, when a trap primer failed the only solutions available were very costly. Not to mention the disruption that having the floor and/or walls ripped up to access and resolve the problem.

In looking for a solution to our trap seal issue we discovered a product called the SureSeal. This product adhered to the ASSE 1072 standard and solved our sewer gas problems - for a fraction of the time and cost. We haven't had one issue since installing a trap seal protection device.

I would like to respectfully address the governing bodies of the plumbing code and urge you to adopt the ASSE 1072 into the code, which would allow these effective, economical, and time saving devices to be used in a broader capacity. We will continue to use trap seal protection devices in place of traditional methods as we have found them to be superior solution for maintaining the trap seal. We have the utmost confidence in using a trap seal protection device that conforms to the ASSE 1072 standard in place of the traditional alternatives.

Sincerely,

Kenneth Nau

To Whom It May Concern,

Our organization would like to express gratitude to those responsible for establishing the ASSE 1072 Standard, which addresses Trap Seal Protection Devices. We have had ongoing issues with sewer odors and pests coming from our floor drains. In our experience, traditional trap primer options do not prove reliable over time. Prior to the establishment of the ASSE 1072 Standard, when a trap primer failed, the only solutions available were very costly and not to mention the disruption of having the floor and/or walls ripped up to access and resolve the problem.

In looking for a solution to our trap seal issue, we discovered a product called the SureSeal. This product adhered to the ASSE 1072 Standard and solved our sewer gas problems - for a fraction of the time and cost. In addition to odor control, we installed these in areas where our pest control company had identified a constant problem with pests. We identified that they were coming from floor drains that had lost their seal. Since installing this device, we have eliminated the problem and the company is recommending these to customers with the same problems. We have not had one issue since installing a trap seal protection device.

I would like to respectfully address the governing bodies of the plumbing code and urge you to adopt the ASSE 1072 into the code, which would allow these effective, economical, and time saving devices to be used in a broader capacity. We will continue to use trap seal protection devices in place of traditional methods, as we have found them to be a superior solution for maintaining the trap seal. We have the utmost confidence in using a trap seal protection device that conforms to the ASSE 1072 standard in place of the traditional alternatives.

To Whom It May Concern,

I recently purchased and installed a SureSeal In-Line Waterless Trap Protection Device - a product which conforms to the ASSE 1072 standard. I have found it to be a great solution to my floor drain odor problems. The Trap Seal Protection Devise worked effectively stopping sewer gases and odors from coming through my floor drains. It was very easy for me to install and saved a lot time and expense.

I understand that the plumbing code does not currently recognize the new ASSE 1072 standard for Trap Seal Protection Devices. As the code approval effectively controls what types of devices can be used in new construction; I ask that you take my opinion into consideration on this matter.

I have a unique situation where a water based trap is not practicable. The drain is used for heater/air conditioner condensate and water heater overflow. These demands on the drain and trap would frequently NOT be sufficient to keep a water based trap functioning. I will also be installing Sure Seal devices in my vacation home, where consistent water sources for water based traps are not present.

Therefore, I found using a Trap Seal protection devise which conforms to the ASSE 1072, to be a superior solution over the traditional water based alternatives. I believe that ASSE 1072 standard is a major advancement in plumbing systems and I support its adoption into the plumbing code. I urge you to support the inclusion of the ASSE 1072 into the plumbing code. I believe this new standard to a better alternative to traditional methods - that are expensive, labor intensive, disruptive and demand a constant source of water to be effective.

I thank you for taking action on this matter.

Sincerely,

Robin M. McPeters

Subject: comments regarding SureSeal

"Mr. Sherman,

Thank you very much for your product. It works wonderfully. I have a house built in the 1920's and from what I can tell there is no trap in the floor. It relied on a "trap" in the floor drain itself, which never worked. Now I have no odor in the basement and can still use the floor drains, when needed.

Great Product,

Stephen Patoray"

"Thank you for the follow-up. The SureSeal product is exactly what I was looking for – Eric"

Re: Failing Trap Primers

Dear Allen,

We have had problems with sewer gas smell in our buildings at the Gig Harbor Corporate Center for some time. We have been adding water to some of our floor drains, which helps for a while. After the construction of our buildings in 1997 and 1998, we were having sewer smell problems that came up through the floor drains, and Tacoma Plumbing came out and installed a new product called Sure Seal. That solved the problem in all restrooms where those were installed.

We would like to have your company install the Sure Seals in the remainder of restrooms to replace the failed trap primers that still exist.

Thank you again for a product that works.

Respectfully,

Debi Daily

Re: Sunrise Medical Campus Sure-Seal Devices

Dear Al:

Thank you for installing the "Sure-Seal" devices on the floor drains in our restrooms in Building 3 at Sunrise Medical Campus.

As you know, we were having problems with sewer smells from the floor drains due to manufacturing trap primers. Since you installed the "Sure-Seals" in the restrooms, this problem has gone away entirely.

Thanks again for a great product. We would recommend your "Sure-Seals" to anyone.

Sincerely,

Ben Kocaj
