I am solidly against having a data center installed at the former 3M complex on 2222 and River Place.

I believe it will cause irreparable damage to the Bull Creek ecosystem and the wildlife it was set aside to protect due to noise, vibration, light pollution, emissions and chance of fire.

I believe these same factors will disrupt its neighbors and children attending nearby schools.

I also believe that the misinformation SB Energy presented to the nearby neighborhood associations regarding water usage, electrical needs and the factors listed above is evidence that the company cannot be trusted to live up to any promises it makes to stay within acceptable limits.
