

Alternative sidewalk products

Items to consider:

Maintenance, washing, sweeping,

Durability of materials, replacement, product availability.

ADA accessible route standards.

Integral colored concrete

smooth polished concrete surface, or into a textured and grained overlay to simulate a more rustic finish. Unlike real wood, no trees are harmed!

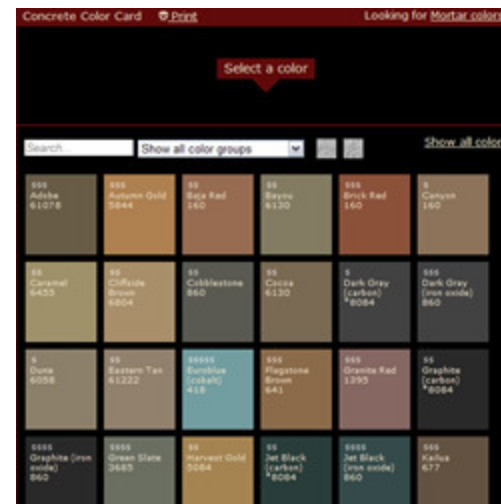

Integral colored concrete

Decorative concrete walkways through the Morton Arboretum help create a sense of place by creatively interpreting themes to help visitors recognize different areas within the extensive four-acre park.

Integral colored concrete

Colored concrete is concrete that has color added to it whether it is stain, painted using integral concrete hardeners, dry shake concrete hardeners or dyed. Colored concrete gives your indoor or outdoor sidewalk, walkway, floor or patio a fresh, new transformation.

Stamped colored concrete

Generally, stamped concrete is less expensive compared to pavers. Installing pavers is usually much more labor intense and time consuming. Stamped concrete requires less maintenance.

This is an example of colored concrete stamping. The color is integral (in the concrete mix) This means any chips that might occur down the road won't be as visible

Stamped colored concrete

The biggest advantage of stamped concrete is its versatility. There are many patterns, textures, and colors that are more readily available.

Stamped colored concrete

Texture Skins

This could be
bordered with pavers

Texture Skins can be used to compliment pattern stamps. When a distinct appearance is desired, these feathered edge stamping mats can be used instead of pattern stamps
