

# 2611 WESTLAKE DRIVE

- EROSION CONTROL NOTES**  
Appendix F-2 (5/22/2011)
- The contractor shall install erosion/sedimentation controls and tree/natural area protective fencing prior to any site preparation work (clearing, grubbing or excavation).
  - The placement of erosion/sedimentation controls shall be in accordance with the Environmental Criteria Manual and the approved Erosion and Sedimentation Control Plan.
  - The placement of tree/natural area protective fencing shall be in accordance with the City of Austin standard Notes for Tree and Natural Area Protection and the approved Grading/Trees and Natural Area Plan.
  - A pre-construction conference shall be held on-site with the contractor, design Engineer/permit applicant and Environmental Inspector after installation of the erosion/sedimentation controls and tree/natural area protection measures and prior to beginning any site preparation work. The contractor shall notify the Planning and Development Review Department, (512)974-2275, at least three days prior to the meeting date.
  - Any major variation in materials or locations of controls or fences from those shown on the approved plans will require a revision and must be approved by the reviewing Engineer, Environmental Specialist or City Arboret as appropriate. Major revisions must be approved by the Planning and Development Review Department. Minor changes to be made as field-revisions to the Erosion and Sedimentation Control Plan may be required by the Environmental Inspector during the course of construction to correct control inadequacies.
  - The contractor is required to inspect the controls and fences at weekly intervals and after significant rainfall events to insure that they are functioning properly. The person(s) responsible for maintenance of controls and fences shall immediately make any necessary repairs to damaged areas. Silt accumulation at controls must be removed when the depth reaches six (6) inches.
  - Prior to final acceptance by the City, half roads and waterway crossings constructed for temporary contractor access must be removed, accumulated sediment removed from the waterway and the area restored to the original grade and revegetated. All land clearing debris shall be disposed of in approved spoil disposal sites.
  - All work must stop if a void in the rock substrate is discovered which is one square foot in total area; blows air from within the substrate and/or constantly receives water during any rain event. At this time it is the responsibility of the Project Manager to immediately contact the City of Austin Environmental Inspector for further investigation.
  - Temporary and Permanent Erosion Control: All disturbed areas shall be restored as noted below.
    - All disturbed areas to be revegetated are required to place a minimum of six (6) inches of topsoil (see Standard Specification Item No. 6015.3(A)). Do not add topsoil within the critical root zone of existing trees. The topsoil shall be composed of 3 parts of soil mixed with 1 part compost, by volume. The compost shall be D60 Dirt or an equal approved by the Engineer, or designated decomposed granite. The approved soil, if used, shall meet the definition of compost (as defined by TDOT Specification Item 161). The soil shall be locally available native soil that meets the following specifications:
      - Must be free of trash, weeds, deleterious materials, rocks, and debris.
      - 100% shall pass through a 0.375-inch (3/16") screen.
      - Soil Texture class to be Loam, Sandy Clay Loam, or Sandy Loam in accordance with the USDA texture triangle. Soil known locally as "red dirt" or Austin Sandy Loam is not an allowable soil. Textural composition shall meet the following criteria:

Texture class	Minimum	Maximum
Clay	5%	25%
Silt	10%	50%
Sand	30%	80%
    - Topsoil salvaged from the existing site may only be used, but it should meet the same standards as set forth in these standards.

**CITY OF AUSTIN STANDARD NOTES FOR TREE AND NATURAL AREA PROTECTION**  
Appendix F-2 (5/22/2011)

- All trees and natural areas shown on plan to be preserved shall be protected during construction with temporary fencing.
- Protective fences shall be erected according to City of Austin Standards for Tree Protection.
- Protective fences shall be installed prior to the start of any site preparation work (clearing, grubbing or grading), and shall be maintained throughout all phases of the construction project.
- Erosion and sedimentation control barriers shall be installed or maintained in a manner which does not result in soil build-up within tree drip lines.
- Protective fences shall surround the trees or groups of trees, and will be located at the outermost limit of branches (drip line), for natural areas, protective fences shall follow the limit of Construction line, in order to prevent the following:
  - Soil compaction in the root zones area resulting from vehicular traffic or storage of equipment or materials;
  - Root zone disturbances due to grade changes (greater than 6 inches cut or fill), or trenching not reviewed and authorized by the City Arboret;
  - Wounds to exposed roots, trunk or limbs by mechanical equipment;
  - Other activities detrimental to trees such as chemical storage, constant truck cleaning, and fires.
- Exceptions to installing fences at tree drip-lines may be permitted in the following cases:
  - Where there is to be an approved grade change, impermeable paving surface, tree well, or other site development, erect the fence approximately 2 to 4 feet beyond the area disturbed;
  - Where permeable paving is to be installed within a tree's drip-line, erect the fence at the outer limit of the permeable paving area (prior to site grading so that this area is graded separately prior to paving installation to minimize root damage);
  - Where trees are close to proposed buildings, erect the fence to allow 6 to 10 feet of work space between the fence and the building;
  - Where there are severe space constraints due to tract size, or other special requirements, contact the City Arboret at 512-974-1876 to discuss alternatives.

**REMEDIAL TREE CARE NOTES AERATION AND SUPPLEMENTAL NUTRIENT REQUIREMENTS FOR TREES WITHIN CONSTRUCTION AREAS**  
Appendix F-4 (1/22/2002)

Trees will be Aerated and Provided Nutrients Prior to any Construction Activity.

As a condition of final acceptance of the site, and in conformance with Environmental Criteria Manual section 3.5.4 - All preserved trees within the limits of construction will be Aerated and provided with Supplemental Nutrients per the following guidelines. Macro and MicroNutrients are required. Humate/Inert solutions with mycorrhizae components are highly recommended. These solutions are commonly used to provide remediation for trees affected by construction. Materials and methods are to be approved by the City Arboret (512)974-1876 prior to application. The owner or general contractor shall select a fertilization contractor and insure coordination with the City Arboret Phone: (512)974-1876.

Treatment is to commence prior to the beginning of construction activities and again after the completion of all construction. Areas to be treated include the entire critical root zone of trees as depicted on the City approved plans. Trees are to be aerated by water injected into the soil under pressure via a soil probe at 50-125 pounds per square inch) or by edger method as approved by Planning and Development Review Department. The Proposed Nutrient Mix Specifications need to be provided to and approved by the City Arboret prior to application. Applicants may also specify soil injection of Doggett X-1 injecto 82-7-7 or equivalent at recommended rates. Construction which will be completed in less than 90 days should use materials at 1/2 recommended rates. Alternative organic fertilizer materials are acceptable when approved by the City Arboret. Within 7 days after fertilization is performed, the contractor shall provide documentation of the work performed to the City Arboret, Planning and Development Review Department P.O. Box 1088, Austin, Texas 78767. This Note should be referenced as item #1 in the Sequence of Construction.

**GENERAL NOTES:**

- This project is not located over the Edwards Aquifer recharge zone.
- Deed restrictions or restrictive covenants are applicable to this property.
- A business or home quarter may not be constructed on a pier or similar structure extending into or above Lake Austin, except under a license agreement approved by the council.
- Contractor to verify utility locations and ground and low line elevations before construction.
- Environmental Inspector has the authority to add and/or modify erosion/sedimentation controls on site to keep project in compliance with the City of Austin Rules and Regulations.
- Approval of these plans by the City of Austin indicates compliance with applicable City regulations only.
- Approval by other government entities may be required prior to the start of construction. The applicant is responsible for determining what additional approvals may be necessary.

**Site Plan Release Notes:**

The following site plan release notes are included in accordance with the City of Austin's request. Applicant will comply with all applicable City of Austin requirements.

- All improvements shall be made in accordance with the released site plan. Any additional improvements will require site plan amendment and approval of the Planning & Development Review Department.
- All signs must comply with requirements of the Land Development Code (Section 13-2, Article VIII).
- Additional electric elements may be required at a later date.
- All existing structures shown to be removed will require a demolition permit from the City of Austin Planning & Development Review Department.
- A development permit must be issued prior to an application for building permit for non-consolidated or Planning Commission approved site plans.
- For driveway construction: The owner is responsible for all costs for relocation of, or damage to, utilities. For construction within the right-of-way, a concrete permit is required.
- For the building permit, a signed and sealed letter shall be submitted to the City of Austin, per the Land Development Code, 25-12-3 1612.4, certifying that the structure is in accordance with ASCE 24, Flood Resistant Design and Construction.
- All work will occur within the limits of construction as shown on the plan, and that no materials or equipment will be delivered to the site from the landward side of this project.

**STANDARD SEQUENCE OF CONSTRUCTION**

- No Construction is proposed, all existing.

Vegetative stabilization of areas disturbed by construction shall be as follows:

**TEMPORARY VEGETATIVE STABILIZATION:**

- From September 15 to March 1, seeding shall be with cool season cover crops (Wheat at 0.5 pounds per 1000 SF, Oats at 0.5 pounds per 1000 SF, Cereal Rye Grass at 0.5 pounds per 1000 SF) with a total rate of 1.5 pounds per 1000 SF. Cool season cover crops are not permanent erosion control.
- From March 2 to September 14, seeding shall be with hulled Bermuda at a rate of 1 pound per 1000 SF.
  - Fertilizer shall be water soluble with an analysis of 15-15-15 to be applied once at establishment and once during the period of establishment at a rate of 1/2 pound per 1000 SF.
  - Hydro mulch shall comply with Table 1, below.
  - Temporary erosion control shall be acceptable when the grass has grown at least 1/2 inches high with 95% coverage, provided no bare spots larger than 16 square feet exist.
  - When required, native grass seeding shall comply with requirements of the City of Austin Environmental Criteria Manual.

Table 1: Hydro mulching for Temporary Vegetative Stabilization

Material	Description	Longevity	Typical Applications	Application Rates
100% or any blend of wood, cellulose, straw, and/or cotton plant material (except no mulch shall exceed 30% paper)	70% or greater Wood/Straw 80% or less Paper or Natural Fibers	0-3 months	Moderate slopes from 1:1 to 3:1	1500 to 200 lbs per acre

**PERMANENT VEGETATIVE STABILIZATION:**

- From September 15 to March 1, seeding is considered to be temporary stabilization only. If cool season cover crops exist where permanent vegetative stabilization is desired, the grasses shall mowed to a height of less than one-half (1/2) inch and the area shall be re-seeded in accordance with 2, below.
  - From March 2 to September 14, seeding shall be with hulled Bermuda at a rate of 1 pound per 1000 SF with a purity of 95% with 85% germination. Bermuda grass is a warm season grass and is considered permanent erosion control.
    - Fertilizer shall be water soluble with an analysis of 15-15-15 to be applied once at establishment and once during the period of establishment at a rate of 1/2 pound per 1000 SF.
    - Hydro mulch shall comply with Table 2, below.
    - The planted area shall be irrigated or sprinkled in a manner that will not erode the topsoil, but will sufficiently soak the soil to a depth of six inches. The irrigation shall occur at daily intervals (minimum) during the first two months. Rainfall occurrences of 1/2 inch or more shall postpone the watering schedule for one week.
    - Permanent erosion control shall be acceptable when the grass has grown at least 1/2 inches high with 95% coverage, provided no bare spots larger than 16 square feet exist.
    - When required, native grass seeding shall comply with requirements of the City of Austin Environmental Criteria Manual.
- Table 2: Hydro mulching for Permanent Vegetative Stabilization

Material	Description	Longevity	Typical Applications	Application Rates
Bonded Fiber Matrix (BFM)	80% Organic dehydrated fibers 10% Tackifier	6 months	On slopes up to 2:1 and erosive soil conditions	2500 to 4000 lbs per acre (see manufacturers recommendations)
Fiber Reinforced Matrix (FRM)	65% Organic dehydrated fibers 25% Reinforcing fibers or less 10% Tackifier	Up to 12 months	On slopes up to 1:1 and erosive soil conditions	3000 to 4500 lbs per acre (see manufacturers recommendations)

The contractor shall not dispose of surplus excavated material from the site without notifying the Planning and Development Review Department at (512) 974-2275 at least 48 hours prior with the location and a copy of the permit issued to receive the material.

REVISIONS / CORRECTIONS

NO.	DESCRIPTION	REVISE (R) ADD (A) VOID (V) SHEET NO. 9	TOTAL # SHEETS IN PLAN SET	NET CHANGE MP. COVER (SQ. FT.)	TOTAL SITE MP. COVER (SQ. FT.)	CITY OF AUSTIN APPROVAL DATE	DATE IMAGED

No vegetation within the shoreline setback area shall be removed before the issuance of a building permit, except as may be required for surveying and testing. Areas cleared for surveying or testing shall be no more than 15 feet wide and no trees of six inches or more in diameter shall be removed for surveying or testing.

All areas disturbed within the shoreline setback shall be restored in accordance with City of Austin specifications.

All disturbed areas shall be restored as noted in erosion control & restoration notes.

**WATERSHED STATUS:** This site is located in LAKE AUSTIN watershed, is classified as a WATER SUPPLY RURAL watershed and shall be developed, constructed and maintained in conformance with Chapter 25 of the Land Development Code.

**SMART GROWTH ZONE:** Drinking Water Protection Zone

**FLOODPLAIN INFORMATION:** This project is within the 100-year flood plain as shown on the F.E.M.A. panel 48453CO-445H effective 2/23/2008.

**LEGAL DESCRIPTION:** LOT 45 LAKE SHORE ADDITION PLUS LAND ACCRETION BETWEEN LOT AND RIVER, Dead Dog Creek, Sec. 201 10918G1

STREET ADDRESS: 2611 WESTLAKE DRIVE AUSTIN, TEXAS 78746

Construction proposed for March/April, 2000. Drainage, land erosion, and sedimentation are not affected. There are no trees 6" or larger within limits of construction. Piling shall be steel and primed with P684 Red Iron Primer. No dumpster will be required, and scrap will be placed on barges and recycled. All work will be done from the water; no tree protection or fencel line is required. No shoreline modifications or dredging is proposed. NOTE: THE ENVIRONMENTAL INSPECTOR WILL BE CONTACTED AT 771-2078 PRIOR TO CONSTRUCTION.

All responsibility for the adequacy of these plans remains with the engineer / designer who prepared them. In approving these plans, the City of Austin must rely on the adequacy of the work of the engineer / designer.
