

Below are highlights of the results and conclusions of the analysis by Austin Water Utility staff based upon the information provided by PK-RE:

- PK-RE's revenues are currently not adequate to recover operations and maintenance and capital infrastructure costs while maintaining a sufficient rate of return.
- PK-RE is proposing a rate of return of 12.0%. This proposed rate of return is in a range comparable to what has been requested in prior rate filings of other utilities with the Texas Commission on Environmental Quality (TCEQ).

Austin Water recommends that City Council approves the tariff and rate schedule as proposed by PK-RE. The charges and rates proposed by PK-RE are shown below. Customers within PK-RE's service area use an average of approximately 30,000 gallons per month of water and return 23,000 gallons per month of wastewater for treatment.

If lower rates are approved by the TCEQ for PK-RE's customers (TCEQ has jurisdiction over PK-RE's rates outside municipal limits), the lower rate will be applied, through subsequent City Council action, to the customers within the corporate limits of the City.
