

# Shoal Creek Restoration: 15th to 28th Streets

## Open House

7 p.m., Wednesday, December 7, 2011

One Texas Center, 505 Barton Springs Road, Room 325

**Join us to learn more and share feedback about the proposed stream restoration project.**

This project will make improvements to the Shoal Creek corridor from 15th Street to 28th Street, including areas through Pease Park. The project will stabilize approximately 3,000 linear feet of the creek bank, relocate wastewater lines from the creek bed, provide stormwater treatment for water quality and improve vegetation and trails along the sides of the creek.

Example of a streambank restoration project, using limestone and native plants.

### Construction Time Frame

Summer 2013 to Summer 2014  
(Subject to change.)

### Features

- Local limestone boulders and native vegetation will be used to repair the erosion.
- Green infrastructure, such as rain gardens and vegetated filter strips, will filter pollutants from stormwater, enhancing groundwater recharge and improving water quality.
- Areas adjacent to the creek will be restored by removing invasive plants and planting native ones.

### Construction Impacts

- Portions of Pease Park may be closed during construction.
- The Shoal Creek Hike and Bike Trail (from the south end of Pease Park to Shoal Creek Blvd.) may be closed or rerouted during construction.

Example of a rain garden.
