Commissioners:

Please find the attached information developed by others from a fully capable GIS system. Am sharing it with you all now so that you do not miss seeing it in a timely manner for what it possible. This map takes Peck's AGR maps as is and does not change them. It also seeks to honor testimony from other organizations. It also presents a full map that balances, something that no one has gone to the trouble to balance and present to you. I hope that the developers of this map do get an opportunity to present it to you all in a timely manner, but with this you will have at least seen it leading up to your first draft of maps. -- Brad Parsons, Austin, TX.
