

BAC Technical Subcommittee Meeting Agenda  
February 27, 2014 6PM  
One Texas Center  
8<sup>th</sup> Floor, Large Conference Room

1. A discussion of potential improvements to the ramps on HW 360, a popular bicycle route, at the 2222 and 2244 where we have had frequent crashes and deaths over the last decade. The City of Austin bicycle program has had a preliminary discussion with TXDOT engineers about alternatives for improvement and wants more feedback from cyclists who use the route and ramp crossings.
2. Creating a list of top priorities for TXDOT roadways. TXDOT representatives asked us to give input on a list to guide their work on bicycle improvements over the next few years. Projects will be grouped as high priority and medium priority and also those that can be done with simple restriping striping work and larger more capital intensive projects.
