Additional Backup Information

This contract is for a one-time purchase of 444 engine intake air bag filters for four LM6000 gas turbine generators at Austin Energy's Sand Hill Energy Center. These specialized intake air filters are required to allow adequate air flow for efficient engine operation and to prevent the gas turbine engines from ingesting dirt and other contaminants. Failure to maintain adequate gas turbine intake air filters could result in engine damage or reduced production. These intake bag filters meet the gas turbine equipment manufacturer's specifications and are changed every six years to maintain turbine operation at peak efficiency.
