CIZ

PLANNING COMMISSION SITE PLAN EXTENSION REVIEW SHEET

CASE NUMBER:

SPC-2009-0199D(XT2)

PC DATE: April 28, 2014

PROJECT NAME:

Holly Street Power Plant Decommissioning and Demolition Project

ADDRESS:

2401 Holly Street

AREA:

21.54 acres

WATERSHED:

Lady Bird Lake

APPLICANT:

City of Austin – Austin Energy (Eric Stager)

721 Barton Springs Rd.

Austin, TX 78704

AGENT:

Axiom Engineering Inc. (Nicole Folta Findeisen P.E.)

13276 Research Blvd., Suite 208

Austin. Tx 78750

CASE MANAGER: Nikki Hoelter

Phone: (512) 974-2863

Nikki.hoelter@austintexas.gov

EXISTING ZONING: P-NP, Public Neighborhood Plan

PROPOSED DEVELOPMENT: The applicant plans to demolish 28 of 39 structures on the Holly Power Plant site. Once the demolition portion is complete a portion of the site will be converted to parkland. About 20 structures have been demolished, in addition to some utilities and slabs have also been removed. This project is part of the recently retired power plant in the Holly Neighborhood. It sits on approximately 21.54 acres.

STAFF RECOMMENDATION: Staff recommends the requested extension of two years, based on LDC Section 25-5-62(B) The original application for site plan approval was filed with the good faith expectation by the applicant that the development shown on the site plan would be constructed and (C) At least one structure shown on the original site plan and suitable for permanent occupancy has been constructed, or significant infrastructure required for development contemplated by the original site plan has been constructed.

Because this is a demolition project, the opposite would actually apply to both B and C, however a significant portion of the project has been completed.

This approval would extend the life of the permit from June 22, 2014 to June 22, 2016.

<u>PREVIOUS APPROVALS</u>: 6/24/2013 - The site plan was granted a one year administrative extension, extending the permit to June 22, 2014.

PROJECT INFORMATION: 21.495 acres

EXIST. ZONING: P-NP

CM

BLDG. COVERAGE: 13% 122,361sq. ft. **IMPERV. CVRG.**: 62% 582,013 sq. ft.

SUMMARY COMMENTS ON SITE PLAN:

WATERSHED ORDINANCE: This project complies with current watershed regulations.

LAND USE: The site is located in the Waterfront Overlay, Festival Beach Subdistrict. The plan is to demolish existing buildings and improvements, therefore additional structures aren't proposed within the setbacks of the overlay. A portion of the site will become parkland once the demolition is complete.

The plan was originally approved by the Planning Commission on June 22, 2010. The site is zoned P, public, with improvements that exceed an acre, which require commission approval.

The site plan complies with all zoning regulations.

ENVIRONMENTAL: All environmental comments have been cleared. TRANSPORTATION: All transportation comments have been cleared.

EXISTING ZONING AND LAND USES

	ZONING	LAND USES
Site	P-NP	Power Plant
North	P-NP, SF-3	Metz Park, single family residences
South	P-NP	Park and Lady Bird Lake

Re: Extension Request Letter

Holly Street Power Plant Decommissioning and Demolition Project

City File No: SPC-2009-0199D(XT)

Dear Director:

On behalf of the owner of the above referenced facility, we wish to respectfully request a twoyear extension to the site plan permit currently set to expire on June 22, 2014. A one-year extension of the original June 22, 2013 expiration date was granted in 2013. At this time, the approximate date of completion of the work is estimated to be December 15, 2015.

The Holly Street Power Plant Decommissioning and Demolition Project (the Project) is the next phase in the redevelopment of the recently retired, gas-fired, electric generating power plant that sits on the banks of Lady Bird Lake in east Austin. The site occupies a portion of two adjoining tracts of land consisting of a total of 21.54 acres of land. The project site is roughly bounded by Lady Bird Lake to the south, Holly Street to the north, Robert Martinez Jr. Street to the west, and Pedernales Street to the east. Upon completion of the demolition phase, a portion of the site will be converted to parkland and developed according to the requirements as a Community Park. Associated improvements to be completed during this phase will include the demolition of the existing plant infrastructure, relocation of domestic utilities and grading. The project lies entirely within the full purpose jurisdiction of the City of Austin and within the Desired Development Zone. No portion of the project is located within the Drinking Water Protection Zone. Since the project will result in a net decrease in impervious cover and due to its proximity to Town Lake, no 2 or 25/100-year detention ponds are proposed.

The project was submitted for review under current ordinances applicable in the Town Lake (Urban) watershed. The current zoning for the property is P-NP. The project is subject to the requirements of the Holly Neighborhood Plan as well as the Waterfront Overlay District (Festival Beach Subdistrict). An administrative variance for construction within the CWQZ was granted for the project.

Water quality will be protected during the construction phase of the project through the use of temporary erosion control devices installed and maintained in accordance with the City of Austin Environmental Criteria Manual. Construction will proceed in a manner that will maximize the use of temporary erosion control devices. A more detailed sequence of construction is included on Sheet 2 of the construction plans. Temporary spoil storage will occur on site in the location identified on the Erosion Control Plan. Permanent spoil disposal will occur off site in a legally approved location.

As previously discussed, the proposed project will actually result in a decrease in Impervious cover. In light of this fact, no 2-year or 25/100-year detention ponds are proposed. Drainage calculations were performed for the site using the methodology outlined in the City of Austin

Page 2

Drainage Criteria Manual. As shown on the Drainage Plan, the runoff from this site, and the adjacent property to the north and west currently sheet flows across the property and collects in a series of area and on-grade inlets around the site. The site contains several containment areas surrounding existing and former above ground storage tanks that contained fuel and chemicals when the plant was in operation. The containment areas drained to one of several oil-water separators on the site. In order to comply with changing regulations all but one of the oil-water separators were abandoned and runoff from the containment areas was rerouted to the rehabilitated primary oil-water separator. After the demolition of the plant infrastructure these containment areas will be regarded to sheet flow to Town Lake and the associated drainage systems will be demolished.

The critical water quality zone is located on the site 100 feet from the Town Lake shoreline (429.0 contour). A portion of the southern section of the site is located within the 100-year floodplain. The project is located in an urban watershed and no slope map was prepared. The project site contains slopes in excess of 15 percent adjacent to Town Lake and bermed containment areas.

We appreciate your time and consideration in this matter. If you have any questions, please feel free to call.

Very truly yours

Axiom Engineers Inc.

RE:

Case Number SPC-2009-0199D(XT2)

Holly Street Power Plant Decommissioning and Demolition Project

Dear Ms. Hoelter:

The purpose of this letter is to describe the need for additional time on the site permit for Holly Street Power Plant project.

The demolition phase of the project was substantially complete on January 19, 2014. This phase entailed the demolition of most of the structures on the site, along with environmental remediation of the south portion of the property.

The post-demolition phase began in June 2014 and will consist of extensive environmental sampling across the northern portion of the site, along with some concrete removal that was deferred from the demolition phase and backfill of the turbine generator building area. Following the environmental sampling, there will be remediation that is likely to entail soil excavation and removal, along with backfilling. The extent of the excavation will be determined by the results of the sampling.

Due to the additional earthwork that will be needed during the post-demolition phase of this project, Austin Energy is requesting to extend the permit through the end of 2015.

Please call me at 512-322-6226 if you need any further information.

Sincerely,

Eric Stager, PMP

Senior Environmental Scientist

Environmental Services

4 August 2014, Holly Site Status Since Last SDR

- Construction of the Haul Road.
- Dismantling and removal of power-generation-related equipment from the Holly Power Plant buildings for disposal.
- Dismantling of equipment contaminated with polychlorinated biphenyl (PCB) and either decontamination according to the procedures of 40 CFR 761 followed by salvage or recycling, or transport and disposal at a Toxic Substance Control Act (TSCA) permitted landfill for disposal. Abatement of asbestos from dismantled equipment components as necessary to render the equipment into a condition acceptable for disposal.
- Abandonment or removal of underground utilities.
- Abatement of asbestos from building surfaces including boiler walls, pipe installation, floor tiles, and gaskets.
- Regulatory closure of soils associated with the South Assessment Area (SAA) in preparation for reuse as parkland.
- Demolition of peripheral structures according to the Specifications. The following tables list structures demolished during Phase III and structures currently remaining on-site.

Structures Decommissioned and Demolished				
Acid and Caustic Tanks	Battery Building			
Boiler Structures	Control Rooms G & H			
Demineralization Building (L) (includes tanks, pipe racks, and pits)	Demineralized Water Tanks			
Diesel Generator Building	East and West Neutralization Pits			
Former Fuel Oil Tanks 41, 42, 43, 44, & 45	Former Oil Heater Building			
Gas Evaluation Building (P)	Gas Metering Building (O)			
Gas Reducer Structure (R)	Holly Insulation Shop Building (N)			
Hazardous Material Storage Building (M)	Holly Oil Drum Storage Rack			
Holly Units 3 & 4 Analyzer House (J)	Oil Pump Room #1, Auxiliary Piping			
RO Building (excluding structure)	South Assessment Area (SAA) (Former Fuel Tank Farm)			
South Oil/Water Separator	South Stormwater Pump Station			
TGB (elevation below 429' remains)	Training, Oil Drum Storage, and Boat Storage Building (S)			
Wastewater Lift Station
