

Other Low-Income Program Questions

1. To what extent should the low-income programs replace or repair central air conditioners, window air conditioners, furnaces, water heaters and refrigerators?

Earlier Proposal posted on easel pad:

Provide AC/Furnaces in homes originally designed with central air.

Priority: (every ten years)

Decision to replace should be based on:

Age of home

Age of unit and efficiency

Refrigerant Type (R-22)

Cost and effectiveness (expected life) of tune up and maintenance

Coordinate gas furnace replacements with Texas Gas Service,

Add programmable thermostat or other load control device on central AC systems.

2. How should the low-income energy efficiency programs be coordinated with the City's housing programs?
3. What portion of multi-family program funds should be targeted to properties serving low-and low moderate income households that are funded whole or in part by the City?
