

**ITEM FOR ENVIRONMENTAL COMMISSION AGENDA**

**Board Meeting Date Requested:** August 19, 2015

**Name & Number of Project:** 8818 Big View #4  
SP-2014-0227DS

**Name of Applicant or Organization:** Raj and Santosh Singla  
Bruce Aupperle, (512) 329-8241

**Location:** 8818 Big View Drive #4

**Project Filing Date:** June 12, 2014

**WPD/ERM Staff:** Brent Bellinger, 974-2717  
Brent.Bellinger@austintexas.gov

**DSD/Environmental Staff:** Atha Phillips, 974-6303  
atha.phillips@austintexas.gov

**Watershed:** Lake Austin (Water Supply Rural),  
Drinking Water Protection Zone

**Ordinance:** Watershed Protection Ordinance (pre 2014 Lake Austin Ordinance)

**Request:** 1) To make a recommendation to the Land Use Commission for a required approval of dredging up to 56 cubic yards in Lake Austin.  
25-8-652

**Staff Recommendation:** Deny.

**Reasons for** The project can be built with much less dredge and therefore the request for 56 yards is considered excessive.

## MEMORANDUM

**TO:** Mary Gay Maxwell, Chair and Members of the Environmental Commission

**FROM:** Atha Phillips, Environmental Review Specialist Senior  
Development Services Department

**DATE:** August 12, 2015

**SUBJECT:** 8818 Big View Drive #4 – SP-2014-0227DS

On your August 19, 2015 agenda is a request for consideration and possible recommendation to allow dredging up to 56 cubic yards 25-8-652.

### **Description of Property**

The subject property is a 1.63 acre platted lot located in the Lake Austin Watershed, is classified as Water Supply Rural, and is located in the Drinking Water Protection Zone. According to City of Austin GIS, the site is not located over the Edwards Aquifer Recharge Zone. The subdivision, Panther Hollow Creek, Phase 2, was recorded in 2006. The property is located within the Full Purpose Planning Jurisdiction and the lot is zoned SF-1-CO. According to Travis County Appraisal District records, there is no existing residence.

### **Existing Topography/Soil Characteristics/Vegetation**

According to City of Austin GIS, the lot elevation ranges from the Lake Austin shoreline at 492.8 feet mean sea level (msl), to approximately 570 feet msl at the front of the lot, an elevation change of 77.2 feet. The soils according to the Geologic Atlas of Texas are predominantly alluvium (Qal) and fluvial terrace deposits (Qt), i.e. sedimentary soils with some boulders. The vegetation contains existing native trees, (Pecan, Mesquite and Hackberry) and no trees are proposed to be removed with this project. There is a wetland plant community that consists of non-native Elephant Ears and Yellow Irises.

### **Critical Environmental Features/CWOZ**

There are no critical environmental features on site. The project is located within the Critical Water Quality Zone of Lake Austin, which is a 75 foot buffer from the 492.8 feet shoreline elevation. The proposed dock is allowed by code within the Critical Water Quality Zone.

### **Project Background**

The site plan under review was submitted on June 12, 2014 and proposes the construction of a new boat dock. The project is located in a shallow area of the lake and will not only have to seek approval for additional dredge but will also need to seek a BOA variance to extend further than the 30' allowed by code. The proposed dredge spreads beyond the footprint of the dock, creating a channel that extends approximately 20' into the lake. There are existing boat docks along this stretch of Lake Austin and all

were permitted before the rules change in 7/2014 which restricted the amount of dredge to 25 cubic yards.

**Applicable Regulations**

The project was submitted prior to the adoption of the 2014 Lake Austin ordinance, and the applicable code reference is copied below. In 10/2013, the Watershed Protection Ordinance revised the dredging approval requirement and moved it from Drainage 25-7 to Environment 25-8. A second ordinance was also passed in 10/2013 that changed approval of dredging from the Parks Boards to the Planning Commission. In July/2014 the new Lake Austin ordinance took effect. This project was submitted 3 weeks prior to the adoption of the new Lake Austin ordinance and therefore is subject to the Watershed Protection ordinance. The request is not an environmental variance but rather a required approval.

**Watershed Protection Ordinance 10/2013**

25-8-652 FILLS AT LAKE AUSTIN, LADY BIRD LAKE, AND LAKE WALTER E. LONG

(A) Approval by the Planning Commission is required to place fill in Lake Austin, Lady Bird Lake, or Lake Walter E. Long.

(B) A person must file a written application with the Planning Commission for an approval under this section.

(C) This subsection applies to a development application that includes a proposal to modify the shoreline of Lake Austin, Lady Bird Lake, or Lake Walter E. Long; or dredge in or along that lake.

(1) Before the director may approve the development application, the director must submit the development application to the Planning Commission.

(2) The board shall review and comment on:

the navigational safety of a proposed development; or

the effect of a proposed development on the recreational and natural character of Lake Austin, Town Lake, or Lake Walter E. Long.

(3) The board may develop specific criteria for determining:

the navigational safety of a proposed development; or

the effect of a proposed development on the recreational and natural character of Lake Austin, Town Lake, or Lake Walter E. Long.

**Current Code 7/2014**

§ 25-8-652

(E) The director may approve less than 25 cubic yards of dredging in a lake if the dredging is necessary for navigation safety.

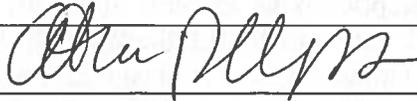

**United States Army Corps of Engineers**

Allows up to 25 cubic yards of dredge under a nationwide permit.

**Recommendation**

Environmental staff finds the amount of dredging excessive and will have a detrimental impact on the natural character of Lake Austin. Additionally, a dock can be constructed without the dredging in excess of 25 cubic yards.

**Subject:** Dredge Calculation  
**From:** Jenna Dezinski <jenna@alterstudio.net>  
**Date:** 5/21/2015 11:10 AM  
**To:** bruce aupperle <bruceaupperle@me.com>

The area based on the profile of soil to be removed (hatched on elev) is 62SF x 24'7" length of coffer wall = 1519 cubic feet = 56 cubic yards.

Let me know if this is unclear.

Best,

Jenna Dezinski
