

## Climate's changed before

Isn't it just a  
natural  
cycle?

No one can  
predict the  
weather.

It's all the  
sun's fault  
anyways.

All the “natural suspects” have an alibi

Can't be the sun

**we'd be getting cooler**

Can't be natural cycles

**the entire planet is warming**

Can't be the earth's orbit

**next thing coming is an ice age!**
