

**1E. Methods and means to provide more public education and outreach to new residents and visitors to raise awareness of flash flooding potential, as well as actions and strategies for the public to remain safe**

**Recommendations: (CIP)**

1. Watershed Department enhance the current community outreach approach by actively:
  - a. Tailoring the current “Flood Safety Resources” warning safety tips to include local information specific to the COA residents (refer to Louisville, KY example: <http://www.msdlouky.org/programs/crssite/fpfloodsafety.html>).
  - b. Providing the information in [www.ATXfloods.com](http://www.ATXfloods.com) in a multilingual format
  - c. Educating COA residents on registering their phones and the use of the Integrated Public Alert Warning System (IPAWS) through the COA Office of Homeland Security and Emergency Management.
  - d. Educating COA residents on the Regional Notification System (RNS).
  - e. Issuing NOAA Radios to residents in floodplains.
  - f. Providing information to residents on emergency tool kits (access to attic; breaking through the roof, etc...)
  - g. Coordinating with First Responder agencies on public education/awareness on the difference between rescue (water still rising-danger of drowning vs water crested-shelter in place until help arrives), etc....
  - h. Effectively communicating the flooding chances residents face beyond the standard 100-year floodplain, including outside the floodplain. Creative ways to do so might include games and other education tools. (O&M)
  - i. Educating the Public about 100-year flood plain terminology (O&M)
  - j. Establishing and conducting regular flood informational media blitz events with the goal to reinforce emergency flood preparedness throughout the COA.
2. Watershed Department and the COA incorporate information from the University of Texas at Austin (UT) National Flood Interoperability Experiment with the National Weather Service needed to enhance the safety of all COA residents.
3. Watershed Department coordinate with the University of Texas at A&M for emergency veterinary services in response to flood events:  
<http://vetmed.tamu.edu/files/vetmed/vet/texvet-0815-pages-34-35.pdf>
4. Continue to update FEWS equipment and software due to the reliance of many departments, the Emergency Operations Center (EOC), and the general public that rely on this system. (O&M)
5. Closer coordination with USGS to add more rain and flood stage gauges for better flood forecasting in order to assist first responders during extreme rain events and for potential evacuations of Austin citizens. (O&M)

6. The Lower Colorado River Authority (LCRA) has its own meteorologist. The City of Austin should consider creating a meteorologist position, similar to the meteorologist position at the Lower Colorado River Authority (LCRA). This position would provide expert meteorological support to public safety agencies and other city departments regarding hazardous weather.
7. Watershed Department continuously review and update creek and local flood maps on a 3-year cycle and update as necessary
8. As local flood maps are generated or developed, the Watershed Department should publish and share them online similar to creek floods.
9. Effective marketing techniques should be implemented to include community's challenges with Internet connectivity, specifically areas at risk of flooding.
10. Watershed Department shall encourage Agency Heads and Building Administrators of identified structures in the floodplain to coordinate with their local "First Responder" agencies and develop or update the facility's individual Emergency Response Plan to flooding incidents in response to current flood maps.
11. Require "Flood Zone" signage in flood prone areas by marking the curbs in the color "BLUE" within \_\_ years.
12. Neighborhoods, including camping and lodging areas, with documented creek and local area flooding require signage at all major arterial roads entering the neighborhood to designate area as susceptible to flooding during storms. (Like hurricane zone signage along the Gulf and tsunami signage on the coasts.)
13. Install, inspect, and maintain an Emergency Siren System designed to alert residents and visitors in flood prone areas to (*refer to Tulsa Emergency Siren System*):
  - a. Tune in to local broadcast outlets for additional information
  - b. Evacuate/avoid low-lying areas or any areas where flooding is likely to occur
  - c. Avoid driving in areas where water obscures road boundaries or driving through water that is flowing across roads
  - d. The warning system should include local news media, NOAA Weather Radios and local wireless phone and pager services.
14. Require property owners to notify residents in writing if the leased property is in floodplain. The written notification shall be in the lessee's primary language. Renter's Insurance information should be included with the application.
15. COA develop and implement "First Responder" resources needed in response to expanding city boundaries (Refer to Fire Station Map and Response Times Documents)
  - a. Fire Stations with adequate staffing and operational support
  - b. EMS Stations with adequate staffing and operational support
16. Watershed Department and First Responder Agencies review flooding incidents after 30 days and provide a condensed report to the COA City Council on what worked well and areas needing improvement

17. AISD shall ensure each school campus located within a floodplain has an updated Emergency Preparedness Plan in response to flooding incidents each year.
  - a. Those plans should be reviewed annually by the Administration in conjunction with campus security staff, teachers, local first responders and the Parent Teacher Association (PTA) and the Campus Advisory Council (CAC) leadership. The sample Emergency Preparedness Document (attached) provides the type of information that should be included.
  - b. Conduct annual flood response training with students and staff.
  - c. Develop parental/custodial outreach and education materials so parents/custodians know what to do in a flooding incident emergency (who to call, where to go, etc.) Share plan with PTA and CAC, to include what the plan of action to inform parents/custodians of students will be (meetings, informational brochure, posters, information translated to other language(s) as needed, etc...). Informational materials must be included with "Back-to-School" Night events as well as in standard information packets for each new parent/custodians and students to the AISD. All informational materials must be in the recipients' primary language.
18. Agencies and/or businesses with vulnerable populations:
  - a. Charter Schools and Child Daycare Facilities should properly register to ensure their respective administration and security personnel, staff and parents are included in the "Emergency Flood Preparedness" list with the Watershed Department.
  - b. Agency and Building Administrators of Nursing Homes and other facilities that house vulnerable populations (disabled, incapacitated, minors, Wards of the State, etc...) shall take the same precautionary prevention, intervention and response strategies required of the AISD. (Refer to SAMPLE Emergency Preparedness Document) On-site backup systems, emergency generators and required supplies (food, water, medications, etc...) must be incorporated into the Emergency Response Plan based on the needs of the population housed at the facility.
19. Intergovernmental Coordination
  - a. Continued and increased coordination with surrounding Counties on floodplain hazards in our area for consistency in the educational message and potential cost savings. (O&M)
20. Examine renaming WPD to better communicate to Austin citizens the three primary goals of the Department: Water Quality, Erosion Control, and Flood Mitigation. (O&M)
21. Agencies and Business owners/operators located within floodplains install barriers and/or anchor/secure large items (vehicles, recreational vehicles, equipment and dumpsters, etc...) at risk of posing a danger to residents/occupants, including first responders, downstream.

22. Agencies and Business owners/operators located within floodplains install secure and properly store chemicals (toxic, caustic and flammable) at risk of posing a danger, further injury or damage to residents/occupants, including first responders, downstream. (BO)
23. For COA residents involved in the Flood Buyout Program:
  - a. Ensure that homeowners who choose not to voluntarily sell their home...education around the implications. (BO)
  - b. Ensure property owners understand the consequences of not participating in a voluntary buyout program (e.g., increase in insurance rates, health and safety concerns, neighborhood character, etc...). (BO)
24. Specific to flood plain variances, if development or redevelopment is allowed in a floodplain, the WPD shall provide: (BO)
  - a. Education for safely sheltering in place and
  - b. Disclosure and education when selling or renting property that has been granted a floodplain variance that may constitute a health and safety risk.
25. The WPD will include the Watershed Master Plan “Problem Score” Viewer link as an additional educational/information resource to the COA residents:  
<http://austin.maps.arcgis.com/apps/MapJournal/index.html?appid=d45481abb0804c95a8e6b033188982b9>
26. The WPD shall assist in the establishment of an early warning network to communicate current conditions and warnings to local Home Owners Associations (HOAs) and neighborhood associations to help them get the word to residents, especially the elderly and infirmed, who may not be aware of the flooding danger or who may need assistance. Too many of these at risk families are unaware of the pending dangers.
27. The WPD shall create an informational brochure of available alternate Power Source options available to residents (manual backup system) in flood prone areas that will temporarily support the family’s power source needs until electrical service is restored.
