# Update on Rates Issues and Implementation

Austin Energy Utility Oversight Committee

November 30, 2016

- Tier 1 rate adoption
- Small Commercial demand customers
- Small HOW rate implementation
- State of Texas accounts
- Rates implementation schedule

### Austin Energy's Rate Case Objectives

- Transparent process.
- Adhere to applicable State and local laws and policies.
- Fairness for all customers.
- Sustain long-term financial health of the utility.
- Focus on affordability.

### Two Part Affordability Goal

- Part 1—Annual increases:
  - Less than 2 percent annually
  - All in rates—"base, fuel, riders, etc"
  - Measured from 2012 rates reset
- Part 2—Competitiveness:
  - Maintain "all in" rates in the lower 50 percent of Texas rates overall
  - Measured by federal data (EIA Form 861)

### Progress Toward Competitiveness Goal

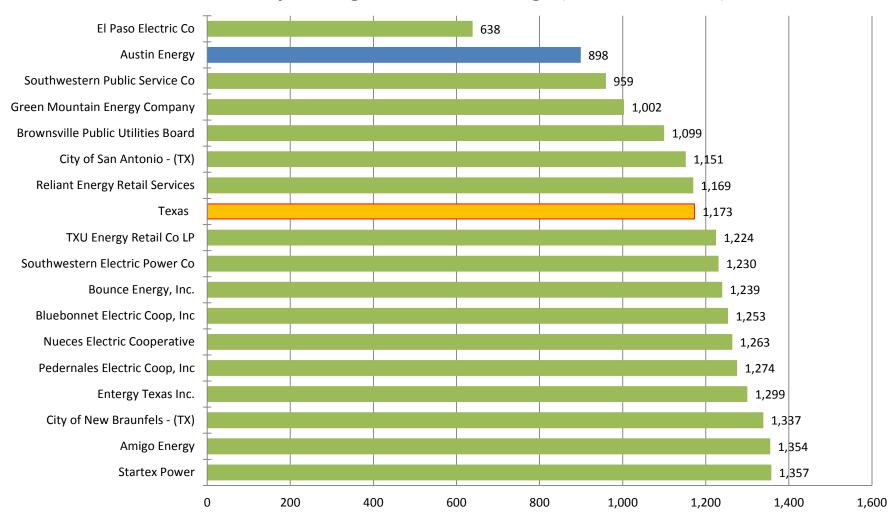

#### **Average System Rate Comparison**

#### Residential Monthly Usage Comparison

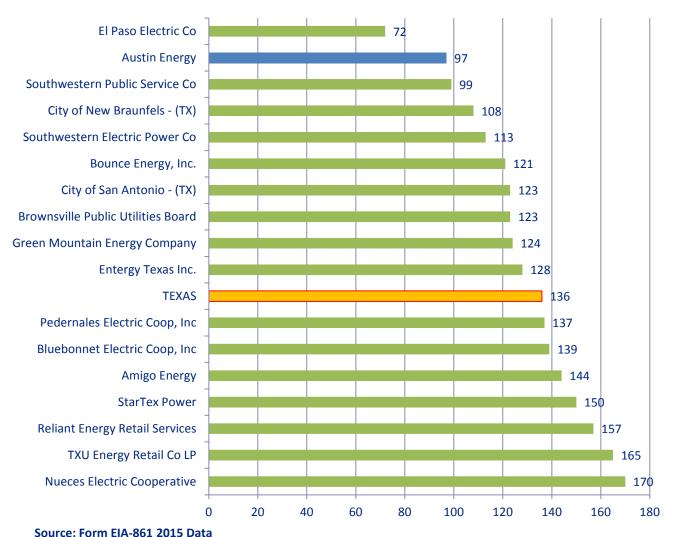

#### 2015 Monthly Average Residential Usage (kWh/Customer)

#### Average Bill for an Average Customer

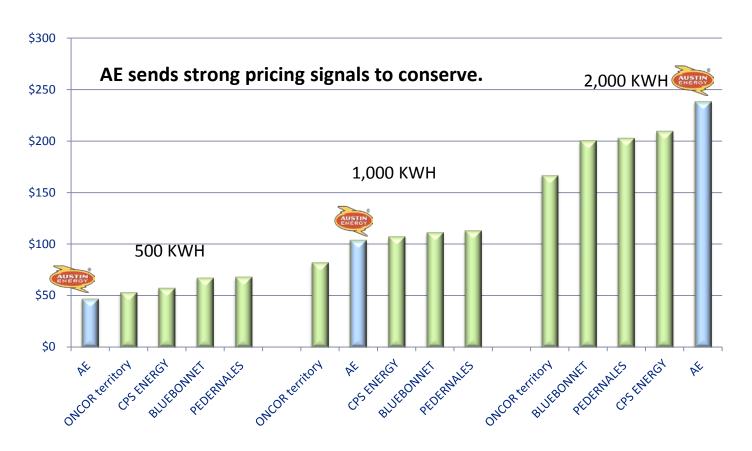

#### 2015 Monthly Average Residential Bills - (\$)

### Residential Electric Bill Comparison

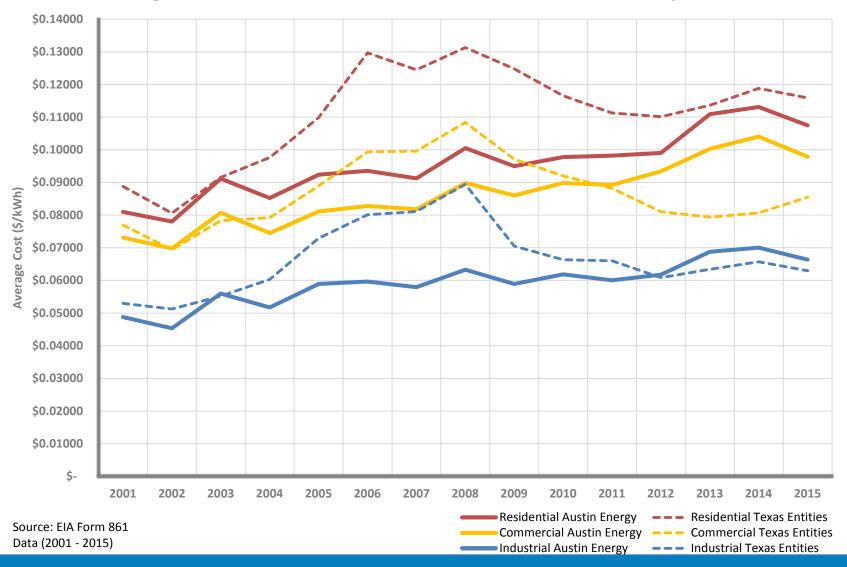

#### **Electric Bills at Various Usage Levels (current rates)**

### Market Competitiveness

#### Average Residential, Commercial, and Industrial Rate Comparison

### Tier 1 Concerns Expressed to Council

- Not all Tier 1 customers receive a "rate" decrease.
  - "Rates" should only include tiers and customer charge.
- Reduction largely due to change in the PSA.

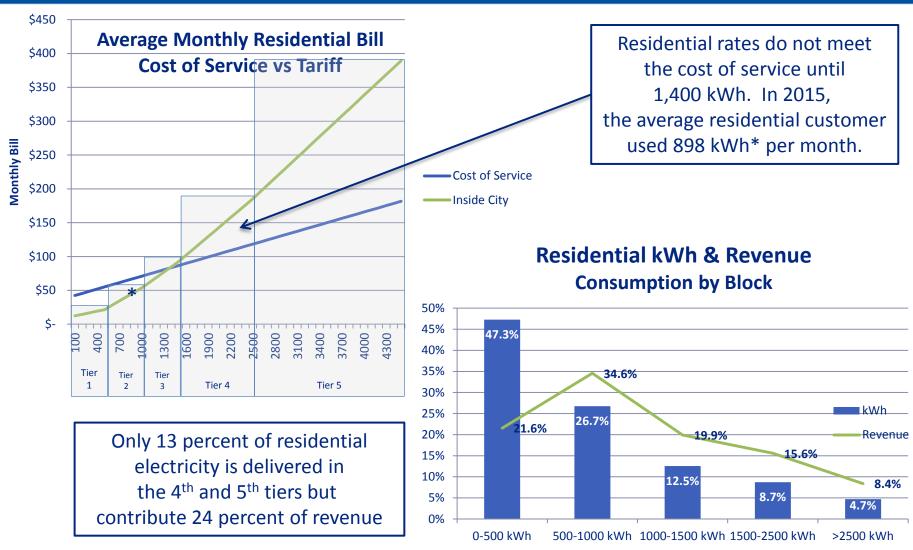

### **Evolving Financial Challenge**

- Changes in our community:
  - Urbanization
  - Share of multi-family properties
  - Average residential customer usage is declining over time
  - Customer growth continues
  - Need for infrastructure remains strong
- Changes in the electric industry:
  - Distributed generation/solar expansion
  - Energy efficiency
  - Building codes
  - Load management
  - Emergence of electric vehicles
- Community goals:
  - 30 years of energy efficiency leadership
  - Austin Climate Protection Plan
  - Austin Energy Resource Generation Plan to 2025
  - Affordability Goals:
    - 2 percent per year
    - Competitiveness

### Nearly 80 Percent of Residential Electricity is Sold Below the Cost of Service

Note: Annual consumption of 898 kWh as reported by EIA is based on 2015 calendar year.

### Council Policy Dialogue

- Discussion dates:
  - AEUOC: August 8, 15 & 22
  - Budget Work Session: August 24
  - Public Hearing: August 25
  - Work Session and adoption: August 29
  - Revised budget adoption: September 14

## Options that Reduce Tier 1 Rate (August 25th)

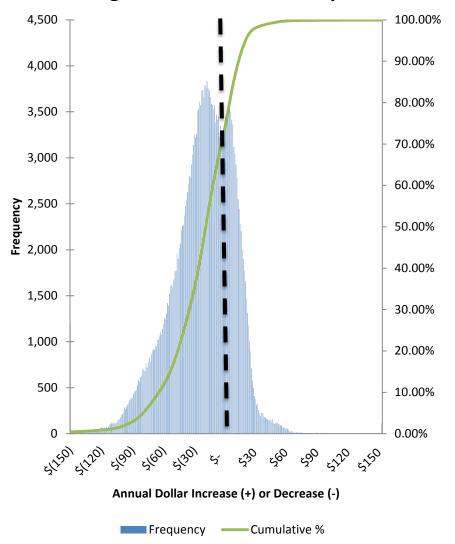

- Reduce Tier 1 rate.
  - Lower bills for a larger number of customers.
- Maintain residential revenue requirement from settlement.
- Three Options based on Council conversation from AE budget session, August 24:
  - (1) Weighted Average Rates with Tier 1 adjustment.
  - (2) Weighted Average Rates with all tier adjustment.
  - (3) No change to total revenue from Tier 1.

#### **Decrease in Annual Bill from Existing Rates**

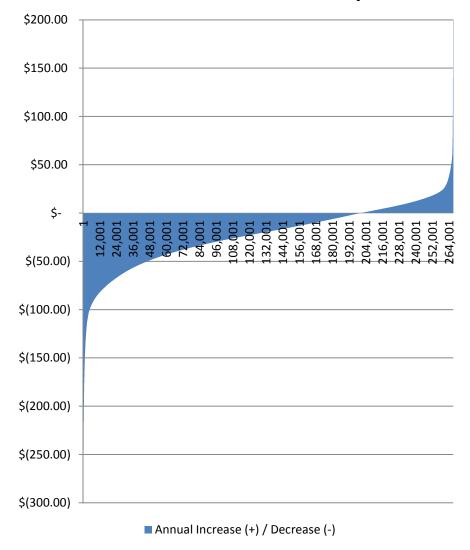

#### **Annual Bill Impacts**

#### **Histogram of Annual Bill Impacts**

#### **Distribution of Annual Bill Impacts**

### Small Commercial Demand Charges

- Issue arises from 2012 rate change:
  - Prior 2012: Two commercial rate classes
    - General Services Demand—greater than 20 kW
    - General Services Non-demand—less than 20 kW
  - 2012 Policy adopted by Council: Three commercial rate classes
    - Secondary 1 (S1)—0 to 10 kW
    - Secondary 2 (S2)—10 to 50 kW
    - Secondary 3 (S3)—greater than 50 kW (later changed in 2016)
- Smaller S2 customers experienced demand charges for the first time:
  - Reports of excessive bills for certain S2 customers

#### Small Commercial Demand Rates Studies

- March 2015: Small Commercial Customer Demand Charge Study
  - Presented to Austin Energy Utility Oversight Committee in April of 2015
  - Confirmed that average rate of certain S2 customers higher than comparable utilities
  - Highly correlated with Load Factor
    - Load Factor: ratio of peak to average usage
    - Indicator of a customer's efficiency in use of electric infrastructure.

### Council Policy Change Adopted

- 2012 rates policy: assigned commercial customers to rate classes based on onetime summer peak
- 2015/2016 budget adoption:
  - Changed metric for capturing demand
    - Average of four month peak
    - Replaced single summer peak
  - 1,733 S2 customers reclassified as S1

#### Small Commercial Demand Rates Studies

- Fall 2015: Secondary Voltage Customer Classes
  - Cost study examining cost differentials among secondary customers
  - Confirmed identifiable cost differential at 10 kW
  - No support for a 20 kW cost differential
- Submitted as evidence in 2016 rate proceeding
  - No intervenors contested the study's conclusion
  - 22 signatories agreed to the customer class boundaries

### Subsequent Council Policies

#### • 2016 rates:

- Established load factor floor at 20 percent load factor
- No intervenors contested the load factor floor recommendation
- 22 signatories agreed to the load factor floor policy change

# Customers Affected by Class Alignment and Load Factor Floor Policy

- 1,700 customers moved to S1 due to change in 2015 budget
- 2014 test year data:
  - S1: 28,000 customers
  - S2 between 10 to 20 kW: 6,200 customers
    - Average monthly usage: 3,199 kWh
    - Annual bills below 20 percent load factor floor: 32 percent
  - S2 above 20 kW: 11,500 customers

# Energy Management Programs and Outreach to Small Commercial Customers

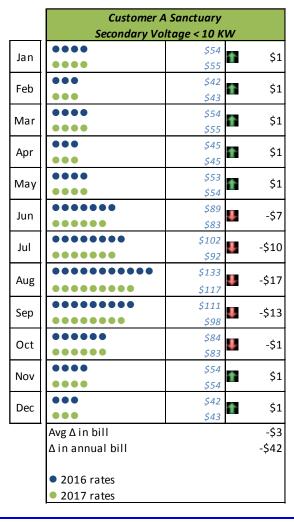

- To align with new rates and allow more customers to benefit from the Small Business Lighting Program, we increased the qualification threshold from 200 – 300 kW.
- \$85 rebate for internet-connected thermostats
- In 2015, we personally contacted over 30 customers with the worst power factor
- In 2017, we will personally contact customers with the worst load factor that are benefiting from the 20 percent load factor floor
- Almost 1,600 small and mid-size commercial accounts are utilizing the Commercial Web App
- New Onsite Energy Advisor program will promote onsite visits from AE conservation personnel

- Extend discount policy for HOWs for four years.
  - Applies only to account metering a sanctuary building (same as current policy).
- Continue to measure demand charges based on weekday peak.
- Rate cap transition:
  - Year 1 (FY17) cap: 13.25 cents
  - Year 2 (FY18) cap: 13.75 cents
  - Year 3 (FY19) cap: 14.25 cents
  - Year 4 (FY20) cap: 14.75 cents
- Study of non-coincident peak usage of commercial customers including HOWs.

### House of Worship-Decomposing Bill Impacts

#### **Customer B Sanctuary Account**

- Decreased an average of \$38 per month from the reduction in base rates
- Discounts changed due to
  - implementation of the load factor floor of 20%
  - Increase of HOW ceiling
- Overall the sanctuary account for this customer increased an average of \$3 per month
