

- For scenarios B and D, baseline demands will be adjusted to simulate the impacts of climate change

Potential Hydrologic Conditions for WAM Simulations

Period of Record Hydrology 1940 - 2016 (A) 77 Years	Period of Record Hydrology with adjustments to reflect climate change (B) 77 Adjusted POR Years
Extended Sampling of Period of Record Conditions (C) 10,000 Years <small>MCMC hydrology allows for the simulation of droughts worse than experienced in the POR</small>	Extended Conditions with Climate Change (D) 10,000 Years MCMC & Climate Change

Weather Adjusted Municipal Diversions
