

Water Conservation Program FY17 2nd Qtr Update

Resource Management Commission

February 21, 2017 Mark Jordan Conservation Program Coordinator

2011 Demand Projection

2017 Baseline Demand Projection

What baseline projection includes

- Population and employment growth
- Sector and end uses of water
- Housing Density
- Land uses
- "Passive" conservation
- Weather

What it doesn't include

- Potential new conservation programs, ordinances, and other demand strategies
- Technological advances in water efficiency
- Potential new water supplies or other related strategies

Population projection

Austin Water Served Population

Austin

Breakdown of Consumption by Sector

Baseline Demand Projections - Consumption

City-Wide Consumption Projections

ATER

Preliminary Demand Management Options • Water Loss Control – reducing water losses in

AW's water distribution system through strategies like leak detection, reducing main break response time, and performing water main replacements

 Automated Metering Infrastructure (AMI) – New meters that provide real time information on customer water use to help encourage efficient water use and identify possible home leaks or other high uses of water that can be corrected by the homeowner

- Landscape Transformation ordinances and/or incentives to encourage changing turf to more water efficient landscaping or limit the amount of turf on properties.
- Irrigation Efficiency ordinances and/or incentives to encourage the use of water efficient landscape irrigation systems

- Commercial/Institutional/Industrial Conservation
 - ordinances and/or incentives to encourage more efficient water use for cooling towers/boiler feeds, AC condensate recovery, swimming pools/decorative fountains, as well as disclosure of inefficient water use fixtures at point of sale
- Plumbing Fixture Efficiency ordinances and/or incentives to encourage use of Energy Star and WaterSense labeled equipment, and for replacement of non-water efficient plumbing fixtures

- Onsite Reuse of Water for Non-Potable Uses ordinances and/or incentives to encourage <u>onsite</u> rainwater harvesting, greywater systems, and dual plumbing (for new developments) in order to reduce the use of drinking water for landscape irrigation and toilet flushing
- Water Use Benchmarking programs to encourage water efficiency benchmarking for new developments and reporting of water use for large building owners

- Customer Education/Outreach programs that continue to educate AW water customers on the conservation and value of water
- Water Rates/Water Fees explore how changes in water rates and water fees may further encourage water use efficiency while maintaining affordability and equity

Public Input Meetings

Workshop #1 – September 6

 Overview of IWRP and Objectives

- Focus Group Meetings January • Landscape/Irrigation/Auxiliary Water/ICI
- Workshop #2 February 8:

 Future Water Supply Needs and Strategies to Meet Them

- Workshop #3 Summer 2017:
 o Portfolio Themes
- Workshop #4 Early 2018:

o Draft Plan Recommendations

www.austintexas.gov/water

Clearly Reliable

Public Input

- Should demand management strategies focus on:
 - Indoor or Outdoor End Uses?
 - Residential, Multi-Family or Commercial Sectors?
 - Existing or New Development?
 - Incentives, Regulations, Operations, Pricing, Other?

Top Water Demand Measures

- Water loss control
- AMI and customer portals with alerts
- Landscape transformation and irrigation efficiencies
- Alternative water supply and reuse
 - Customer Scale (on-site systems)
- Pre-development water evaluations
- Cooling tower efficiency standards

Next Steps

- Develop cost and yield data for existing and selected new strategies
- Conduct economic benefit/cost assessment
- Establish performance benchmarks
- Rank/score using selection
- Consider with supply strategies to develop integrated water resources plan

Project Schedule

	2016								2017									
Task	nuly	6ny 2	Sept	Oct 4	ло 5	9 Dec	7 an	8	6 Mar	1 April	May 11	aunr 12	Ли 13	6ny 14	Sept	to O 16	∧o N 17	ое Ое 18
