

City of Austin
Fire Station No. 3

WEST

Context

Location: 201 West 30th St

Currently, all fire trucks are being parked outside of the apparatus bay.

Recent changes to the floodplain maps cause a significant portion of the building to be in the floodplain.

Introduction

Overview

Construction completed on February 21, 1957

Architect:
Roy Thomas

Does not have any Landmark designations at present.

Adjacent to the Aldridge Place Historic District

Building History

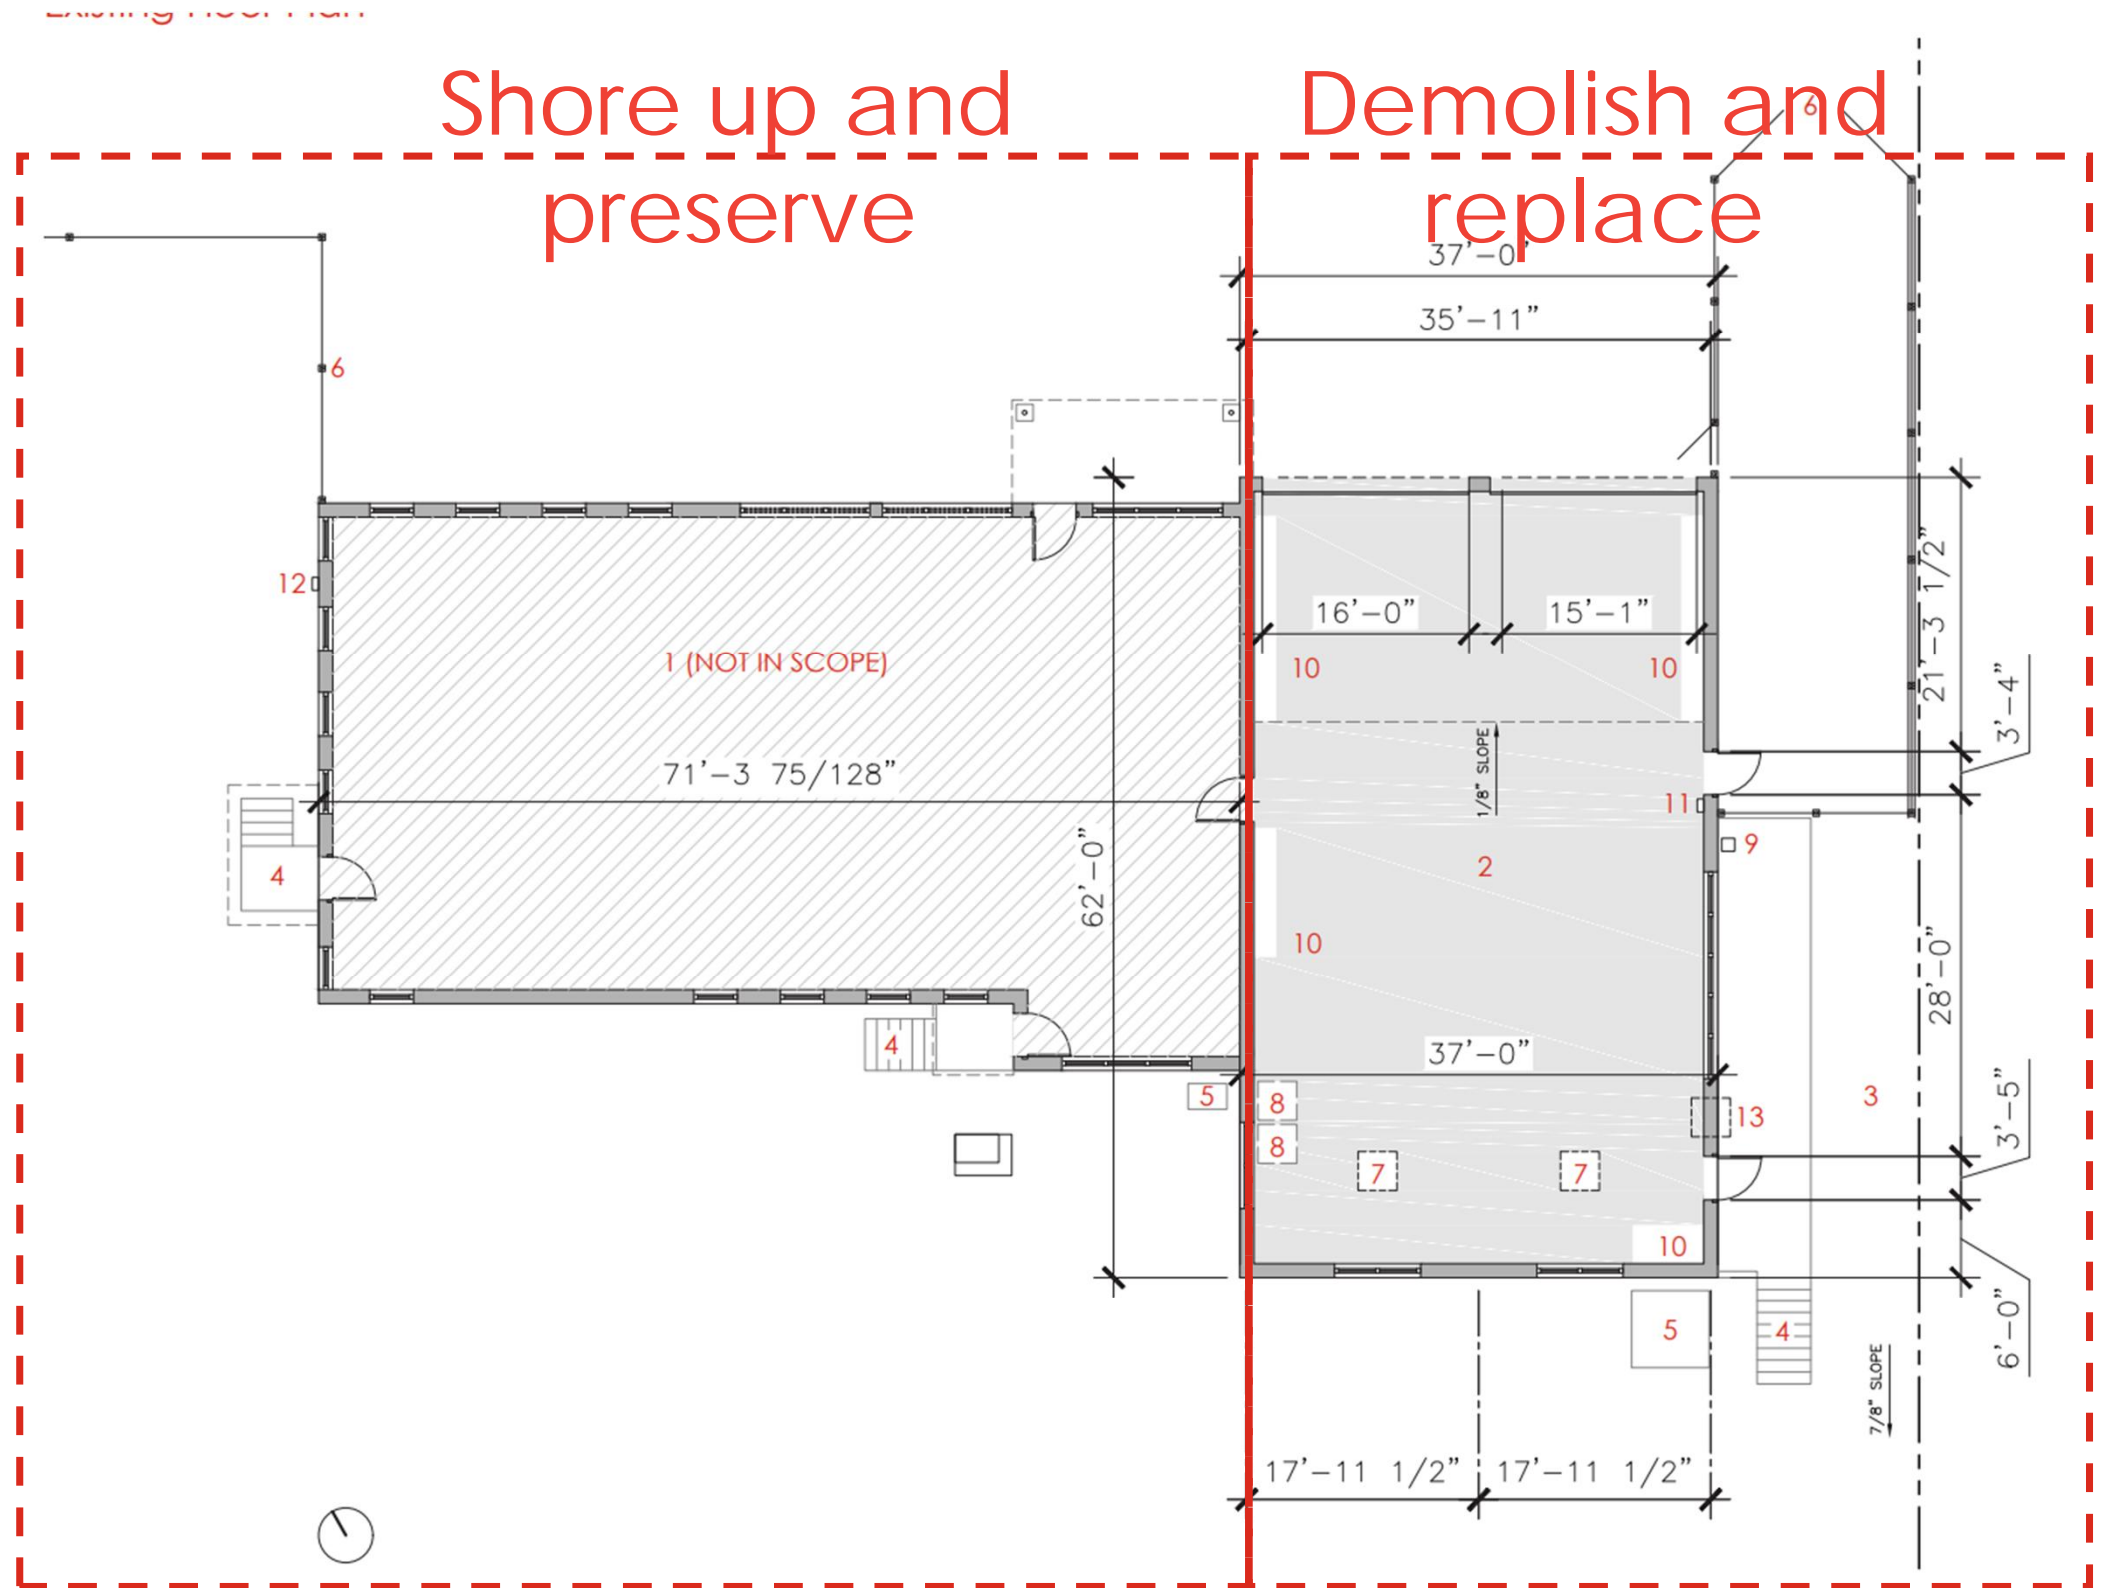

Overview

For the areas that have just suffered age-related wear and tear, the intent is to shore up that portion of the structure and preserve it.

For the apparatus bay, the intent is to demolish the portion of the building that is beyond repair and replace it with a new structure that is sensitive but of its time.

Project Intent

Structural

The City of Austin has conducted three studies of the building.

Two structural studies and one geotechnical report.

The second structural study specifically addressed potential remediation of the existing structure.

All reports have been independently reviewed by the current structural engineer, who concurs with the studies' methodologies and conclusions.

It is our understanding that the aerial ladder truck was in use at Fire Station No. 3 (prior to our findings), so risk of catastrophic failure (i.e. collapse) is likely minimal. It is plausible that the truck alignment when entering the bay of the garage generally forces the alignment of the truck tires directly over the supporting beams. This likely lessens the loading on the slab. However, **misalignment of the truck could cause a failure of the slab.** As a safety precaution, this vehicle should no longer be parked in this fire station.

OTHER RECOMMENDATIONS

Tourism Tag	
-------------	--

Historic

An historic survey of the area was conducted.

This building was identified in the survey.

Recommendations for landmark were included.

Reasoning: Possesses integrity and significance in Postwar Infrastructure Expansion.

Survey

Historic

There are two simple paths:

- 1) The project moves forward without landmark designation.
- 2) The project moves forward with landmark designation.

Historic

Without designation, the project would need approval for the proposed demolition.

With intent for designation, the project would need both approval for the proposed demolition and a Certificate of Appropriateness.

Our understanding is that the permitting process would overlap the landmark process if it were pursued by the city.

Options

Proposal

Preservation of original use

Carrying of roof line

Use of brick

Reuse of original signage

Maintenance of original setback

Compatible massing

Use of period-appropriate detailing

Preservation of historic fabric that is capable of being saved

Design Highlights

Proposal

Original without emulation.

Meets the needs of the modern fire department ensuring decades of continued use.

Preserves what can be saved.

Prevents the potential for a vacant building.
