

# Fleet Software Enhancement Project

---

Transitioning to Rubicon

Zero Waste Advisory Commission

9 November 2022

Created by: Carla-Joy (CJ) Sisco

Presented by: Marcus Gonzalez

# Background

- In 2017, the process began to update the 17-year-old fleet software system.
- After the integration, testing continued to advance the software. During this process, staff identified software gaps could not be resolved. Staff created manual processes to close the gaps.

# Software Gaps

Staff identified several gaps in performance impacting operations. These include:

- Connectivity problems which cause system performance issues
- Inability to install software updates to all computers at once
- Inability to record collection activities on both sides of a street
- Limited video storage and reporting capabilities

# New Software Solution

The contract with ARR's current vendor ends in 2023. Staff has identified Rubicon as the software solution that will provide:

- Optimized routing solutions
- Unified software updates based on departmental requests
- Customized reporting using telematics
- Large capacity storage
- Recording of all collections (both sides of the street)
- Asset management
- Compatibility with existing systems and equipment
