

Population and Demand Projections Water Forward '24

POPULATION AND DEMAND PROJECTIONS

- 1 Purpose & Key Considerations
- 2 Demand Development Process
- 3 Results of DDM
- 4 Next Steps

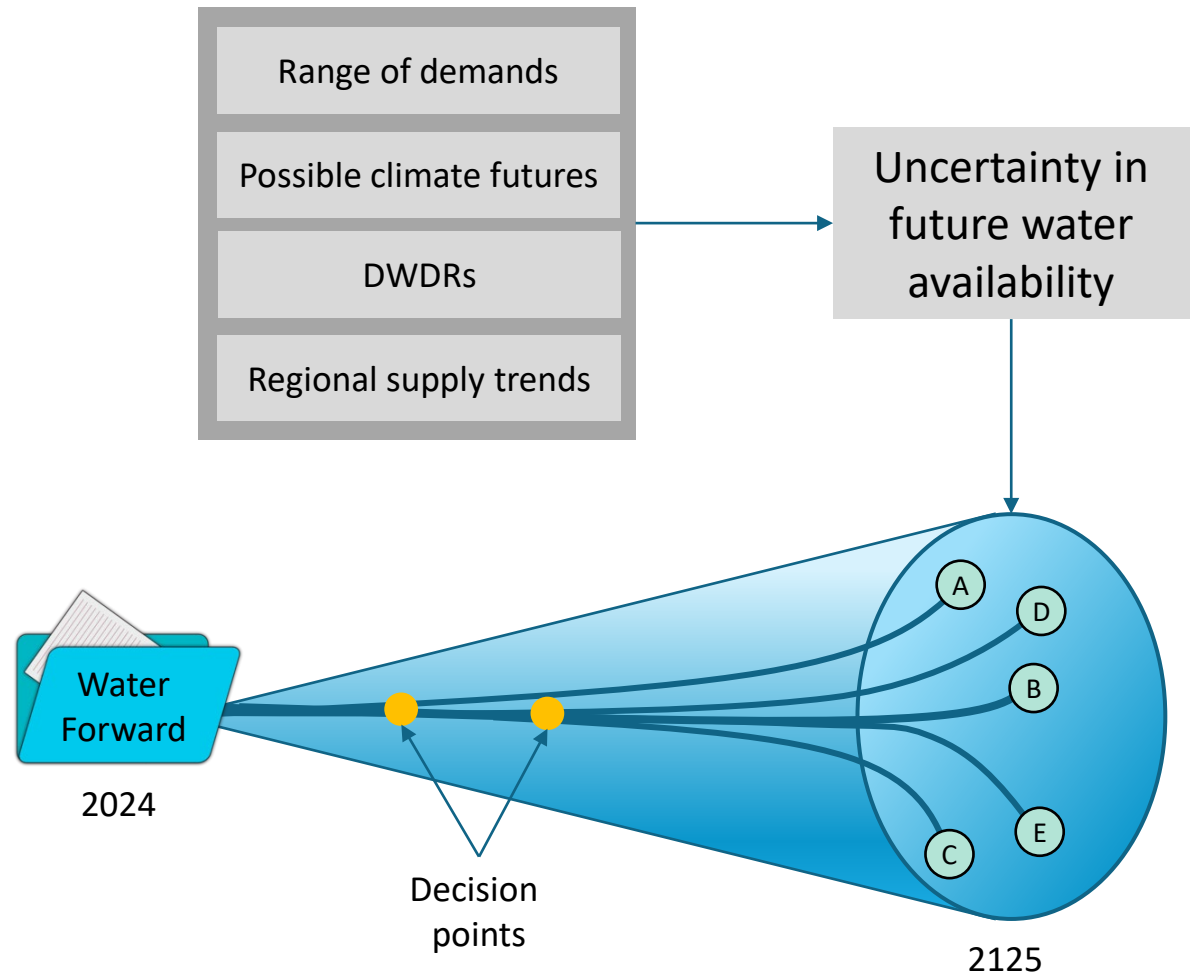

PURPOSE AND KEY CONSIDERATIONS

WATER FORWARD: PLANNING FOR UNCERTAINTY

- Develop a range of future conditions
- Find common near-term strategies that work for a broad range of futures
- Develop adaptive plan with key decision points
- Re-evaluate at key decision points

WATER FORWARD UPDATES: ADAPTIVE MANAGEMENT

100-year look into the future

- This approach provides a **long view**; time to adapt and understand what steps may be necessary to meet AW's needs in 100 years.

5-year updates

- Regular updates of the plan will allow us to incorporate new or better data and review processes for potential improvements.

WATER FORWARD: PLANNING PROCESS

Preliminary Needs Assessment

$$\begin{aligned} &\text{BASELINE DEMANDS} \\ &\text{– EXISTING SUPPLIES} \\ &= \text{PRELIMINARY NEEDS} \end{aligned}$$

- ◆ Baseline demand projections
 - Reflect a continuation of recent trends in demand (i.e. passive conservation)
 - High, medium, and low projections
- ◆ Existing supply projections
 - Reflect >600 possible supply futures developed through climate modeling and various regional project scenarios

Evaluation of Strategies & Portfolios

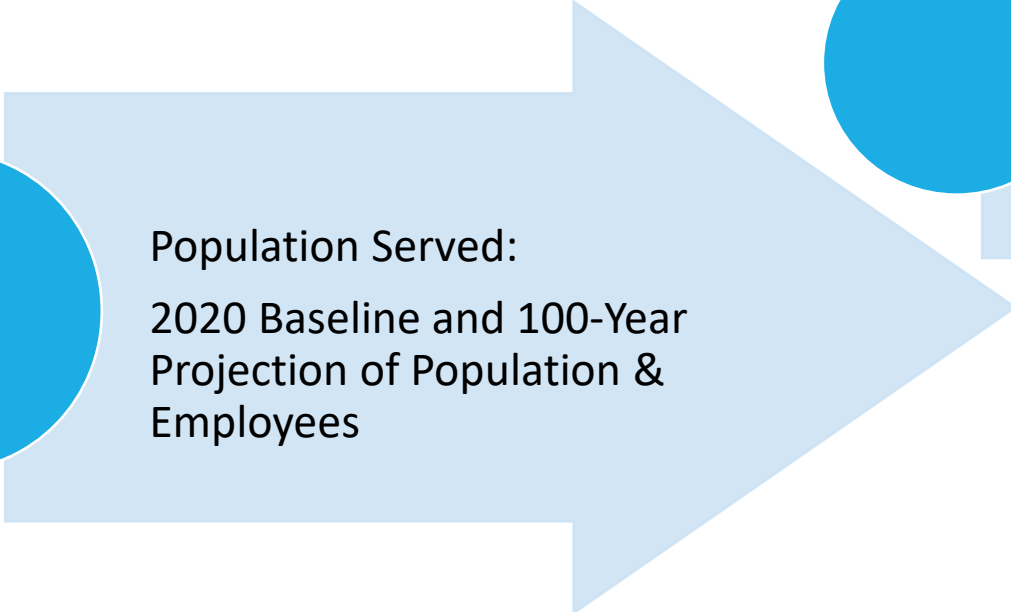

$$\begin{aligned} &(\text{BASELINE DEMANDS – DEMAND REDUCTION}) \\ &\quad \leq \\ &(\text{EXISTING SUPPLIES + FUTURE SUPPLIES}) \end{aligned}$$

- ◆ Baseline demand projections will be reduced by new/expanded demand reduction strategies (i.e. additional conservation, fit-for purpose water)
- ◆ Supply strategies will be added to meet future demand

DEMAND DEVELOPMENT PROCESS & RESULTS

DISAGGREGATED DEMAND MODEL: DEMAND PROJECTION PROCESS

Population Served:
2020 Baseline and 100-Year
Projection of Population &
Employees

Water Use Baseline
and Projection

Demand Projection

DISAGGREGATED DEMAND MODEL: POPULATION PROJECTIONS

Population Served:
2020 Baseline and 100-Year
Projection of Population &
Employees

Historical & Projected AW Served Population

Served Population			
year	Low	Med	High
2020	1,060,000		
2040	1,410,000	1,460,000	1,500,000
2080	2,260,000	2,390,000	2,520,000
2120	2,800,000	3,120,000	3,490,000

DISAGGREGATED DEMAND MODEL: POPULATION PROJECTIONS

2020
5.4 people/acre

2040
5.9 people/acre

2080
8.4 people/acre

2120
9.8 people/acre

Population Served:
2020 Baseline and 100-Year
Projection of Population &
Employees

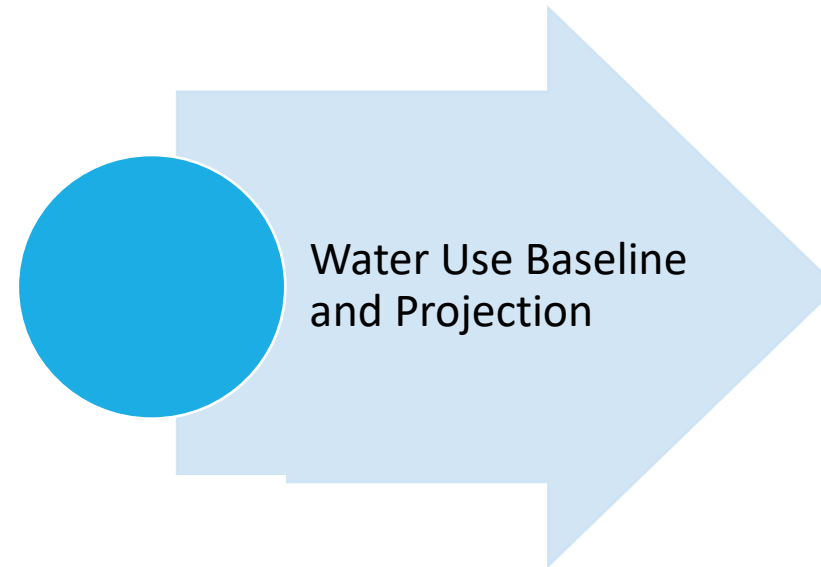

- 100-year population projection includes a gradually slowing growth rate
- Infill and increased density across Austin, estimated distribution based on development data and Imagine Austin growth concept map
- Less greenfield development toward the end of the century

DISAGGREGATED DEMAND MODEL: WATER USE PROJECTION PROCESS

Retail Sector Water Use /
Single- and Multi-family Residential Units
= Residential WUF

Commercial Subsector Water Use /
Employees
= Commercial WUF
Large Volume Customer Projections

Wholesale Projections
COA Projections

2020 Demands (AF/Y)

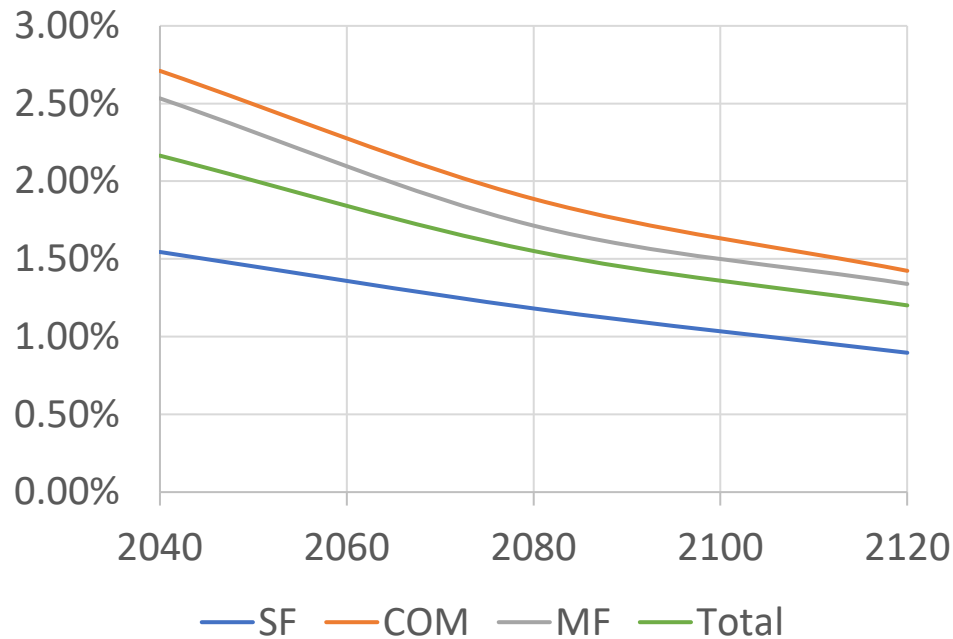

- City of Austin
- Commercial
- Large Volume
- Residential
- Wholesale

DISAGGREGATED DEMAND MODEL: WATER USE PROJECTION PROCESS

Projected WUF % Reduction from Baseline

- City of Austin
- Commercial
- Large Volume
- Residential
- Wholesale

2020 Demands (AF/Y)

2120 Demands (AF/Y)

DISAGGREGATED DEMAND MODEL: BASELINE DEMAND RESULTS

Projected Units & Employees x Projected WUF = Sector/Subsector Demand

Projection ● 1. Low ● 2. Medium ● 3. High

Total Demand (Acre-Feet/year)			
year	Low	Med	High
2020	130,000		
2040	185,000	191,000	196,000
2080	297,000	312,000	328,000
2120	368,000	406,000	449,000

DISAGGREGATED DEMAND MODEL: BASELINE DEMAND RESULTS

Projected Units & Employees x Projected WUF = Sector/Subsector Demand

2020 Demands (AF/Y)

2040 Demands (AF/Y)

2080 Demands (AF/Y)

2120 Demands (AF/Y)

Demand Projection

DISAGGREGATED DEMAND MODEL: BASELINE DEMAND RESULTS

Projected Units & Employees x Projected WUF = Sector/Subsector Demand

Indoor/Outdoor Water Consumption

Indoor/Outdoor Water Consumption

BASELINE DEMAND PROJECTIONS: COMPARISON WITH 2018

- Range of demands reflects uncertainty
- Updated demographic and water use inputs
- Refinements in demographic and WUF projection methodology

NEXT STEPS

- Preliminary needs analysis using the three demand projections
- Water Management Strategy characterization
