

Water Management Strategy Implementation Report - Highlights

Fourth Quarter 2025, October - December

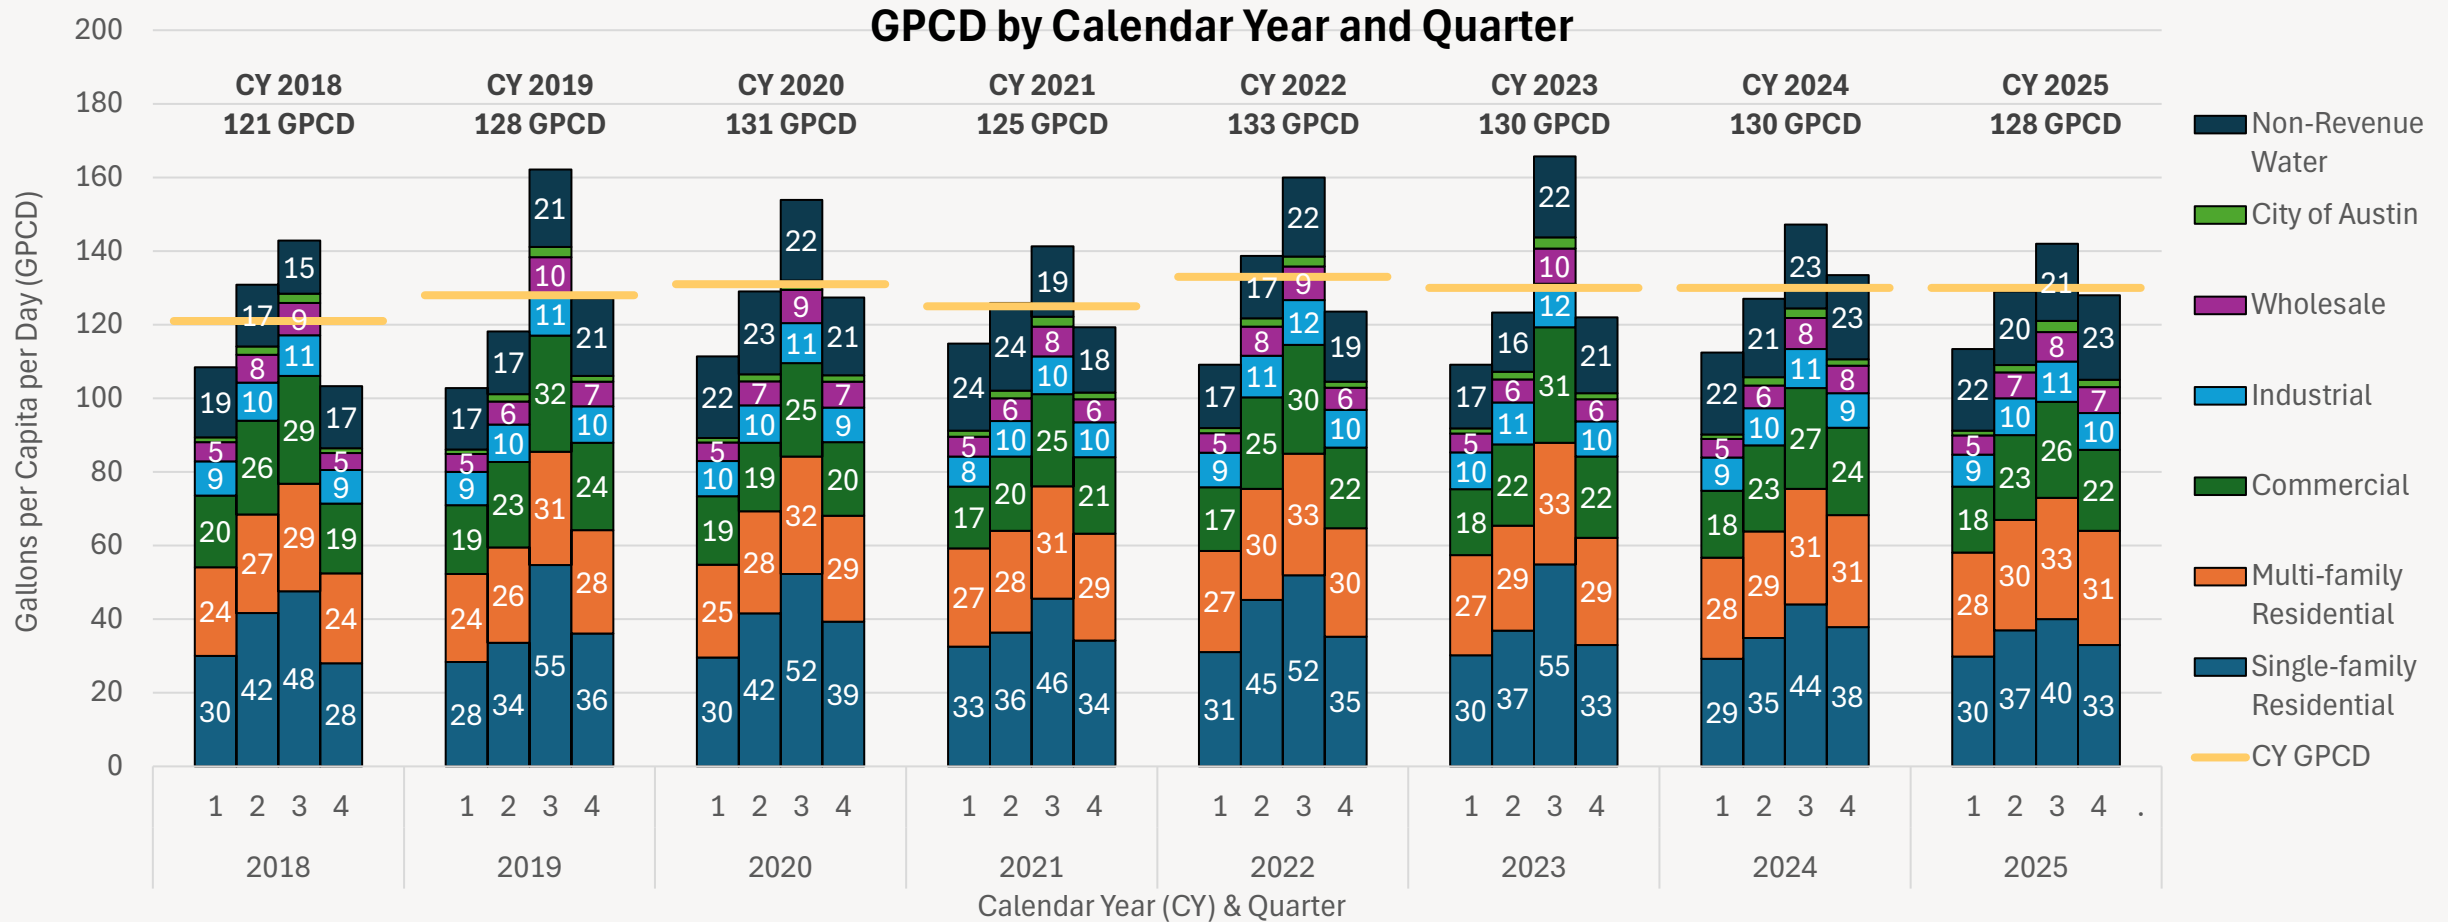

Resource Management Commission | February 17, 2026

Q4 Highlights

- 1,600 new residential automatic irrigation systems inspected since October 2024.
- Over 30 million gallons saved through participation in rebate programs in 2025.
- Position added and staff training completed to address water loss.
- Monthly Home Water Reports had an average 68% open rate (industry average is 25%).
- Onsite Water Reuse System Operator Training Manager and certificate program published.

Water Use and GPCD (Gallons Per Capita Daily)

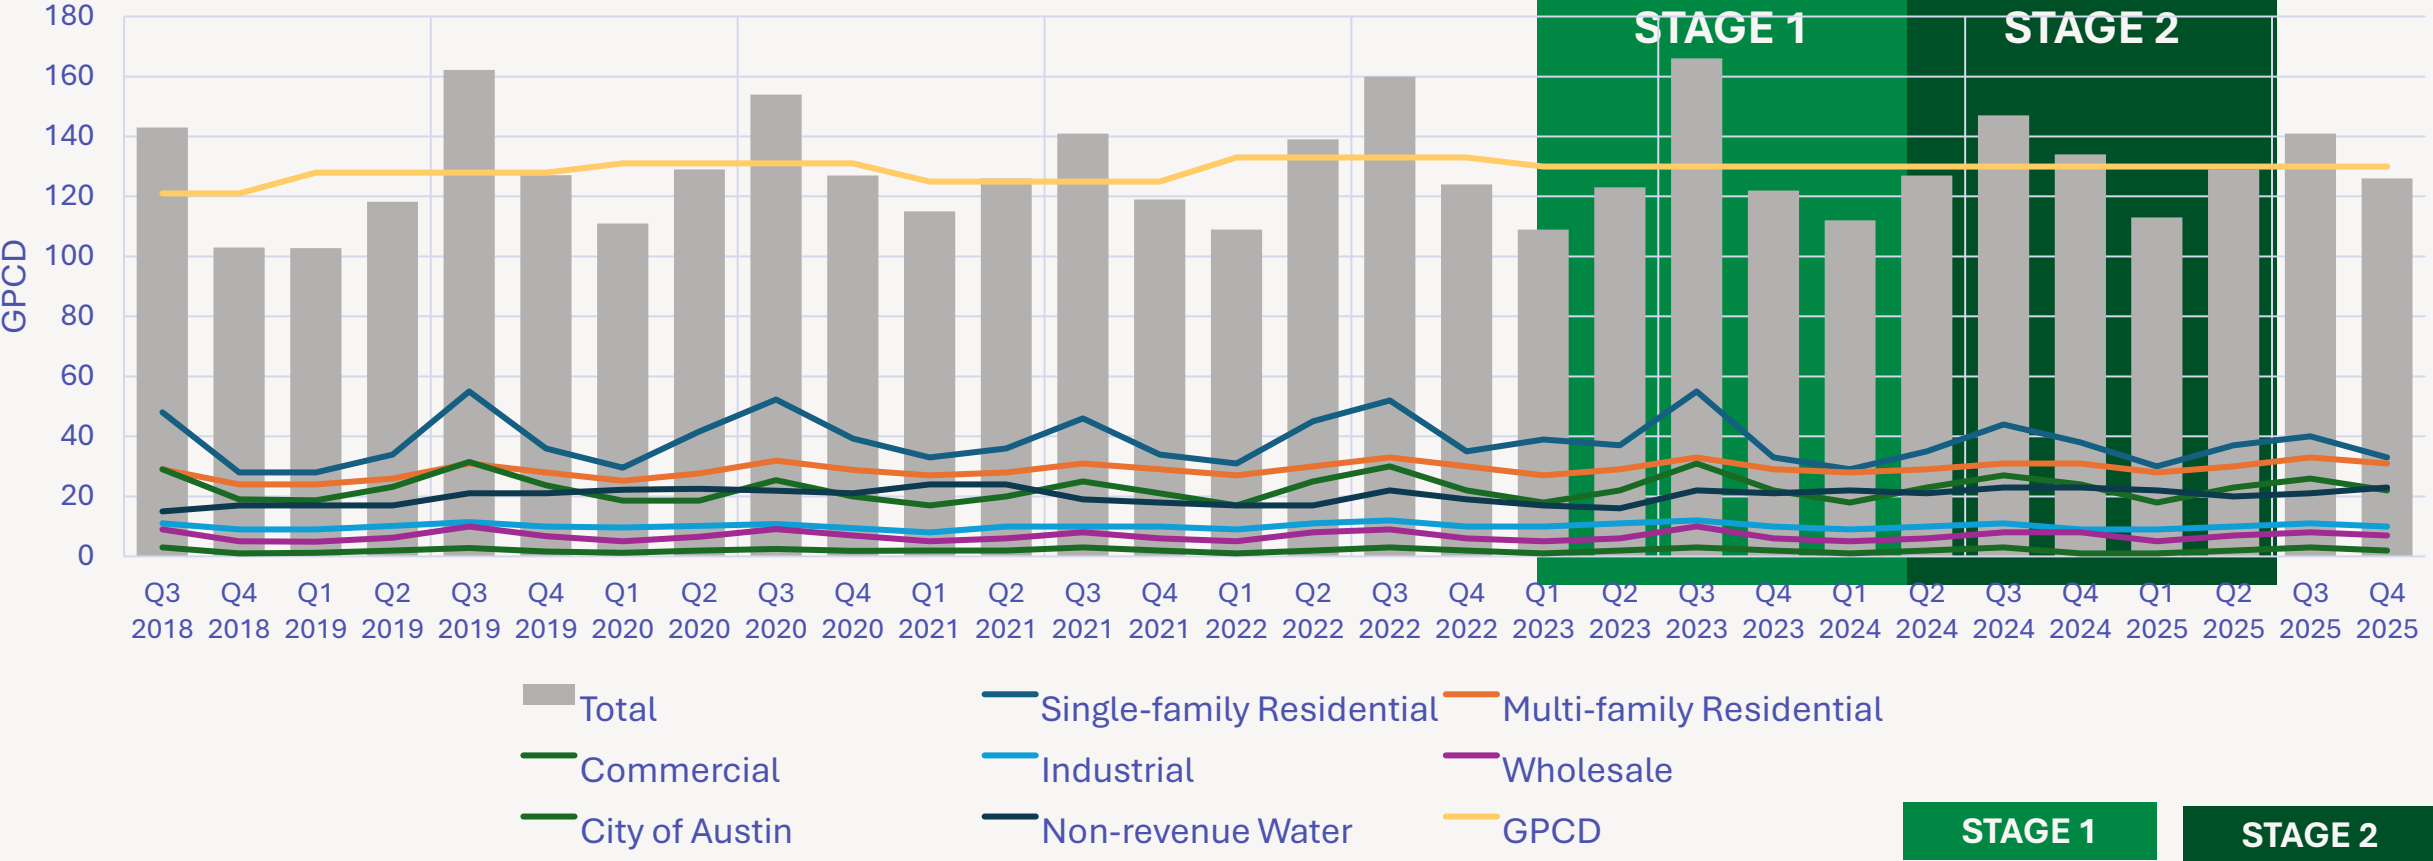

Residential Water Use

Highest use with greatest variation

GPCD by Calendar Year and Quarter

STAGE 1

STAGE 2

Takeaways and Next Steps

- Lower GPCD (128) is the result of conservation efforts and the significant July rainfall.
- Future water loss reduction activities:
 - 17,500 feet of large-diameter leak detection scheduled for Q1
 - Zone Scan leak detection deployment with AMI system
 - Installation of 550 ultrasonic meters with acoustic leak detection
- Continued planning for Aquifer Storage and Recovery field testing in Travis County.
- Enforcement of landscape transformation activities for new homes (April 6, 2026):
 - Limitation of automatic irrigation area
 - Additional irrigation system water-saving components
