Browning Hangar: Massing Studies

Massing

Single structure with two leasable areas flanking one side, with smaller accessory structures to the south.

TOTAL AREA: 13,000 SF

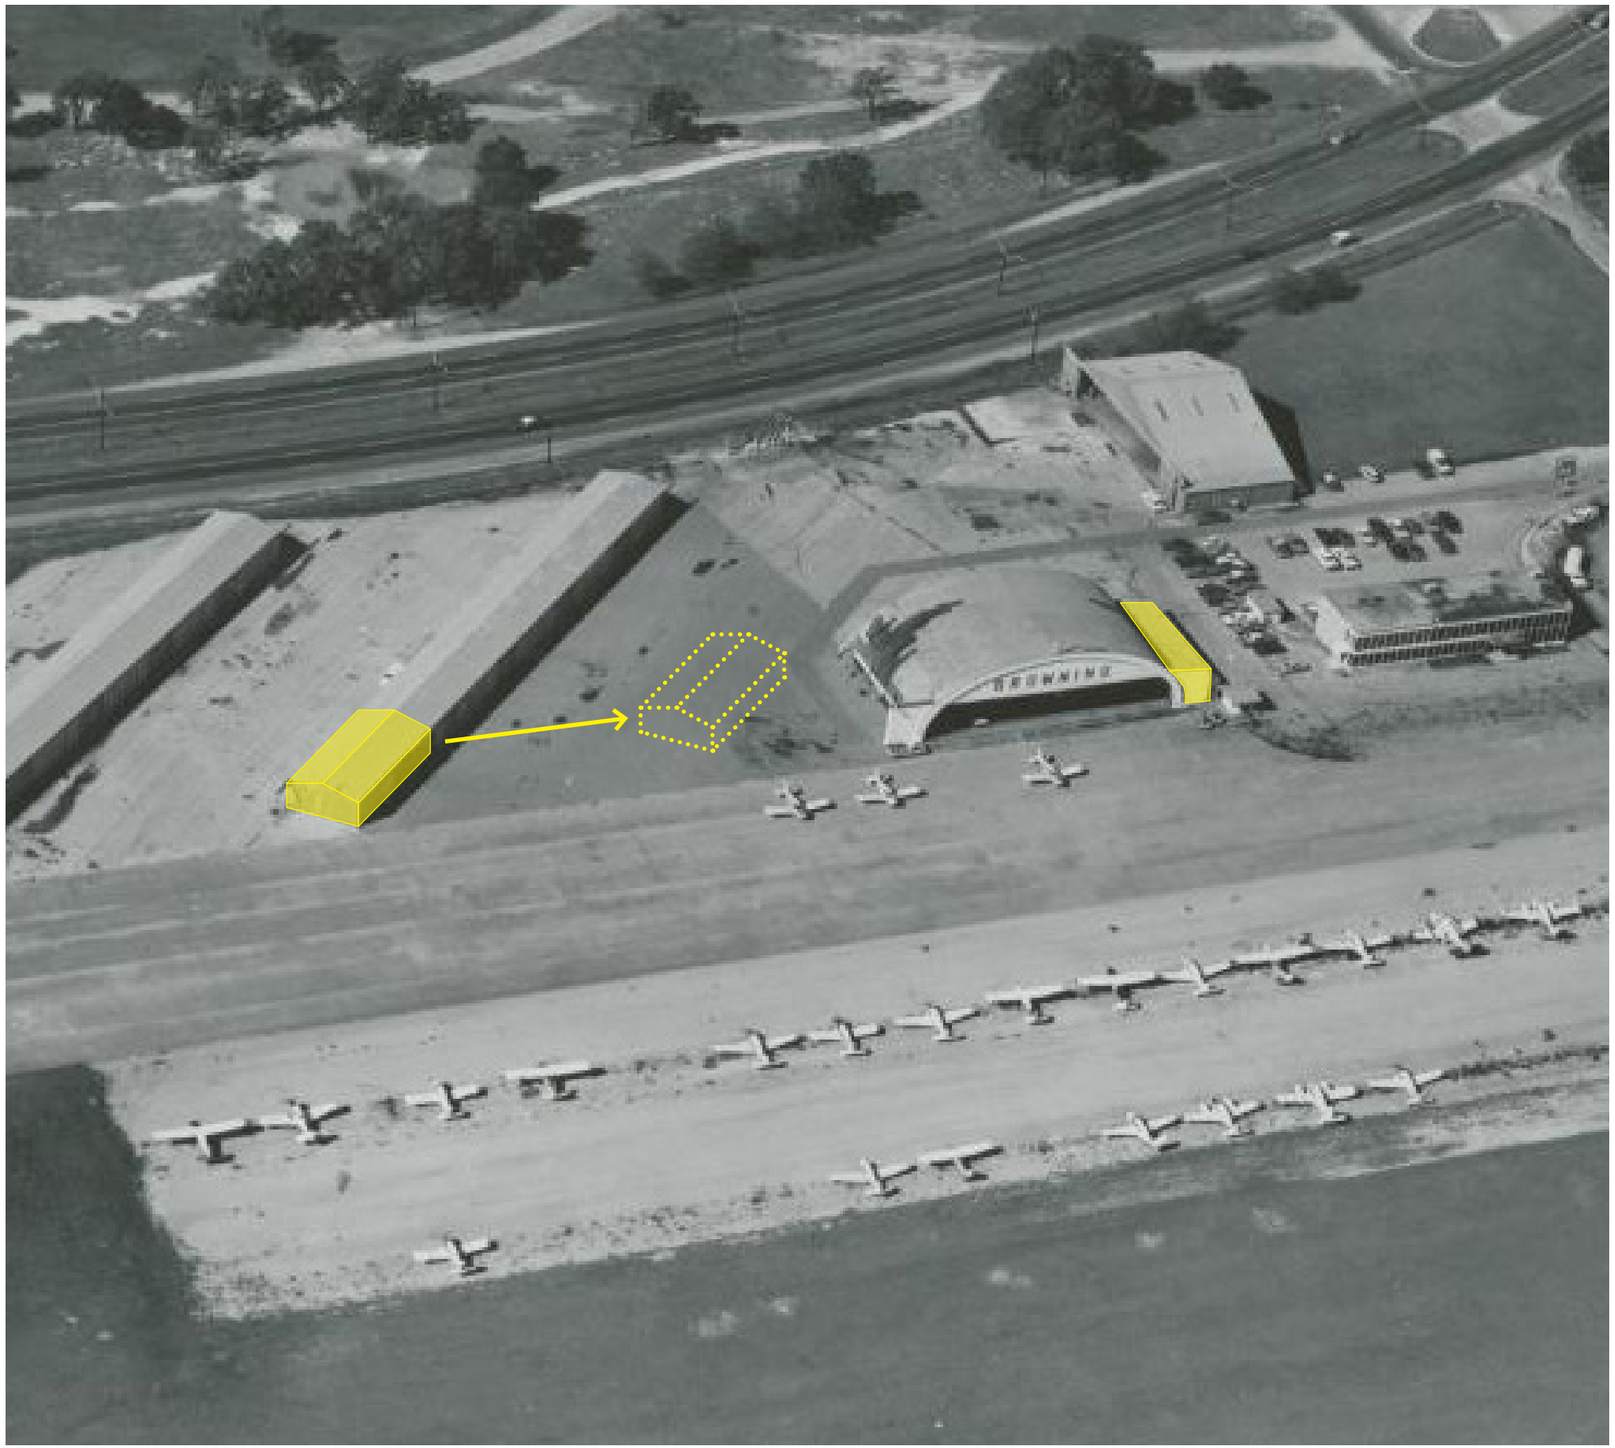

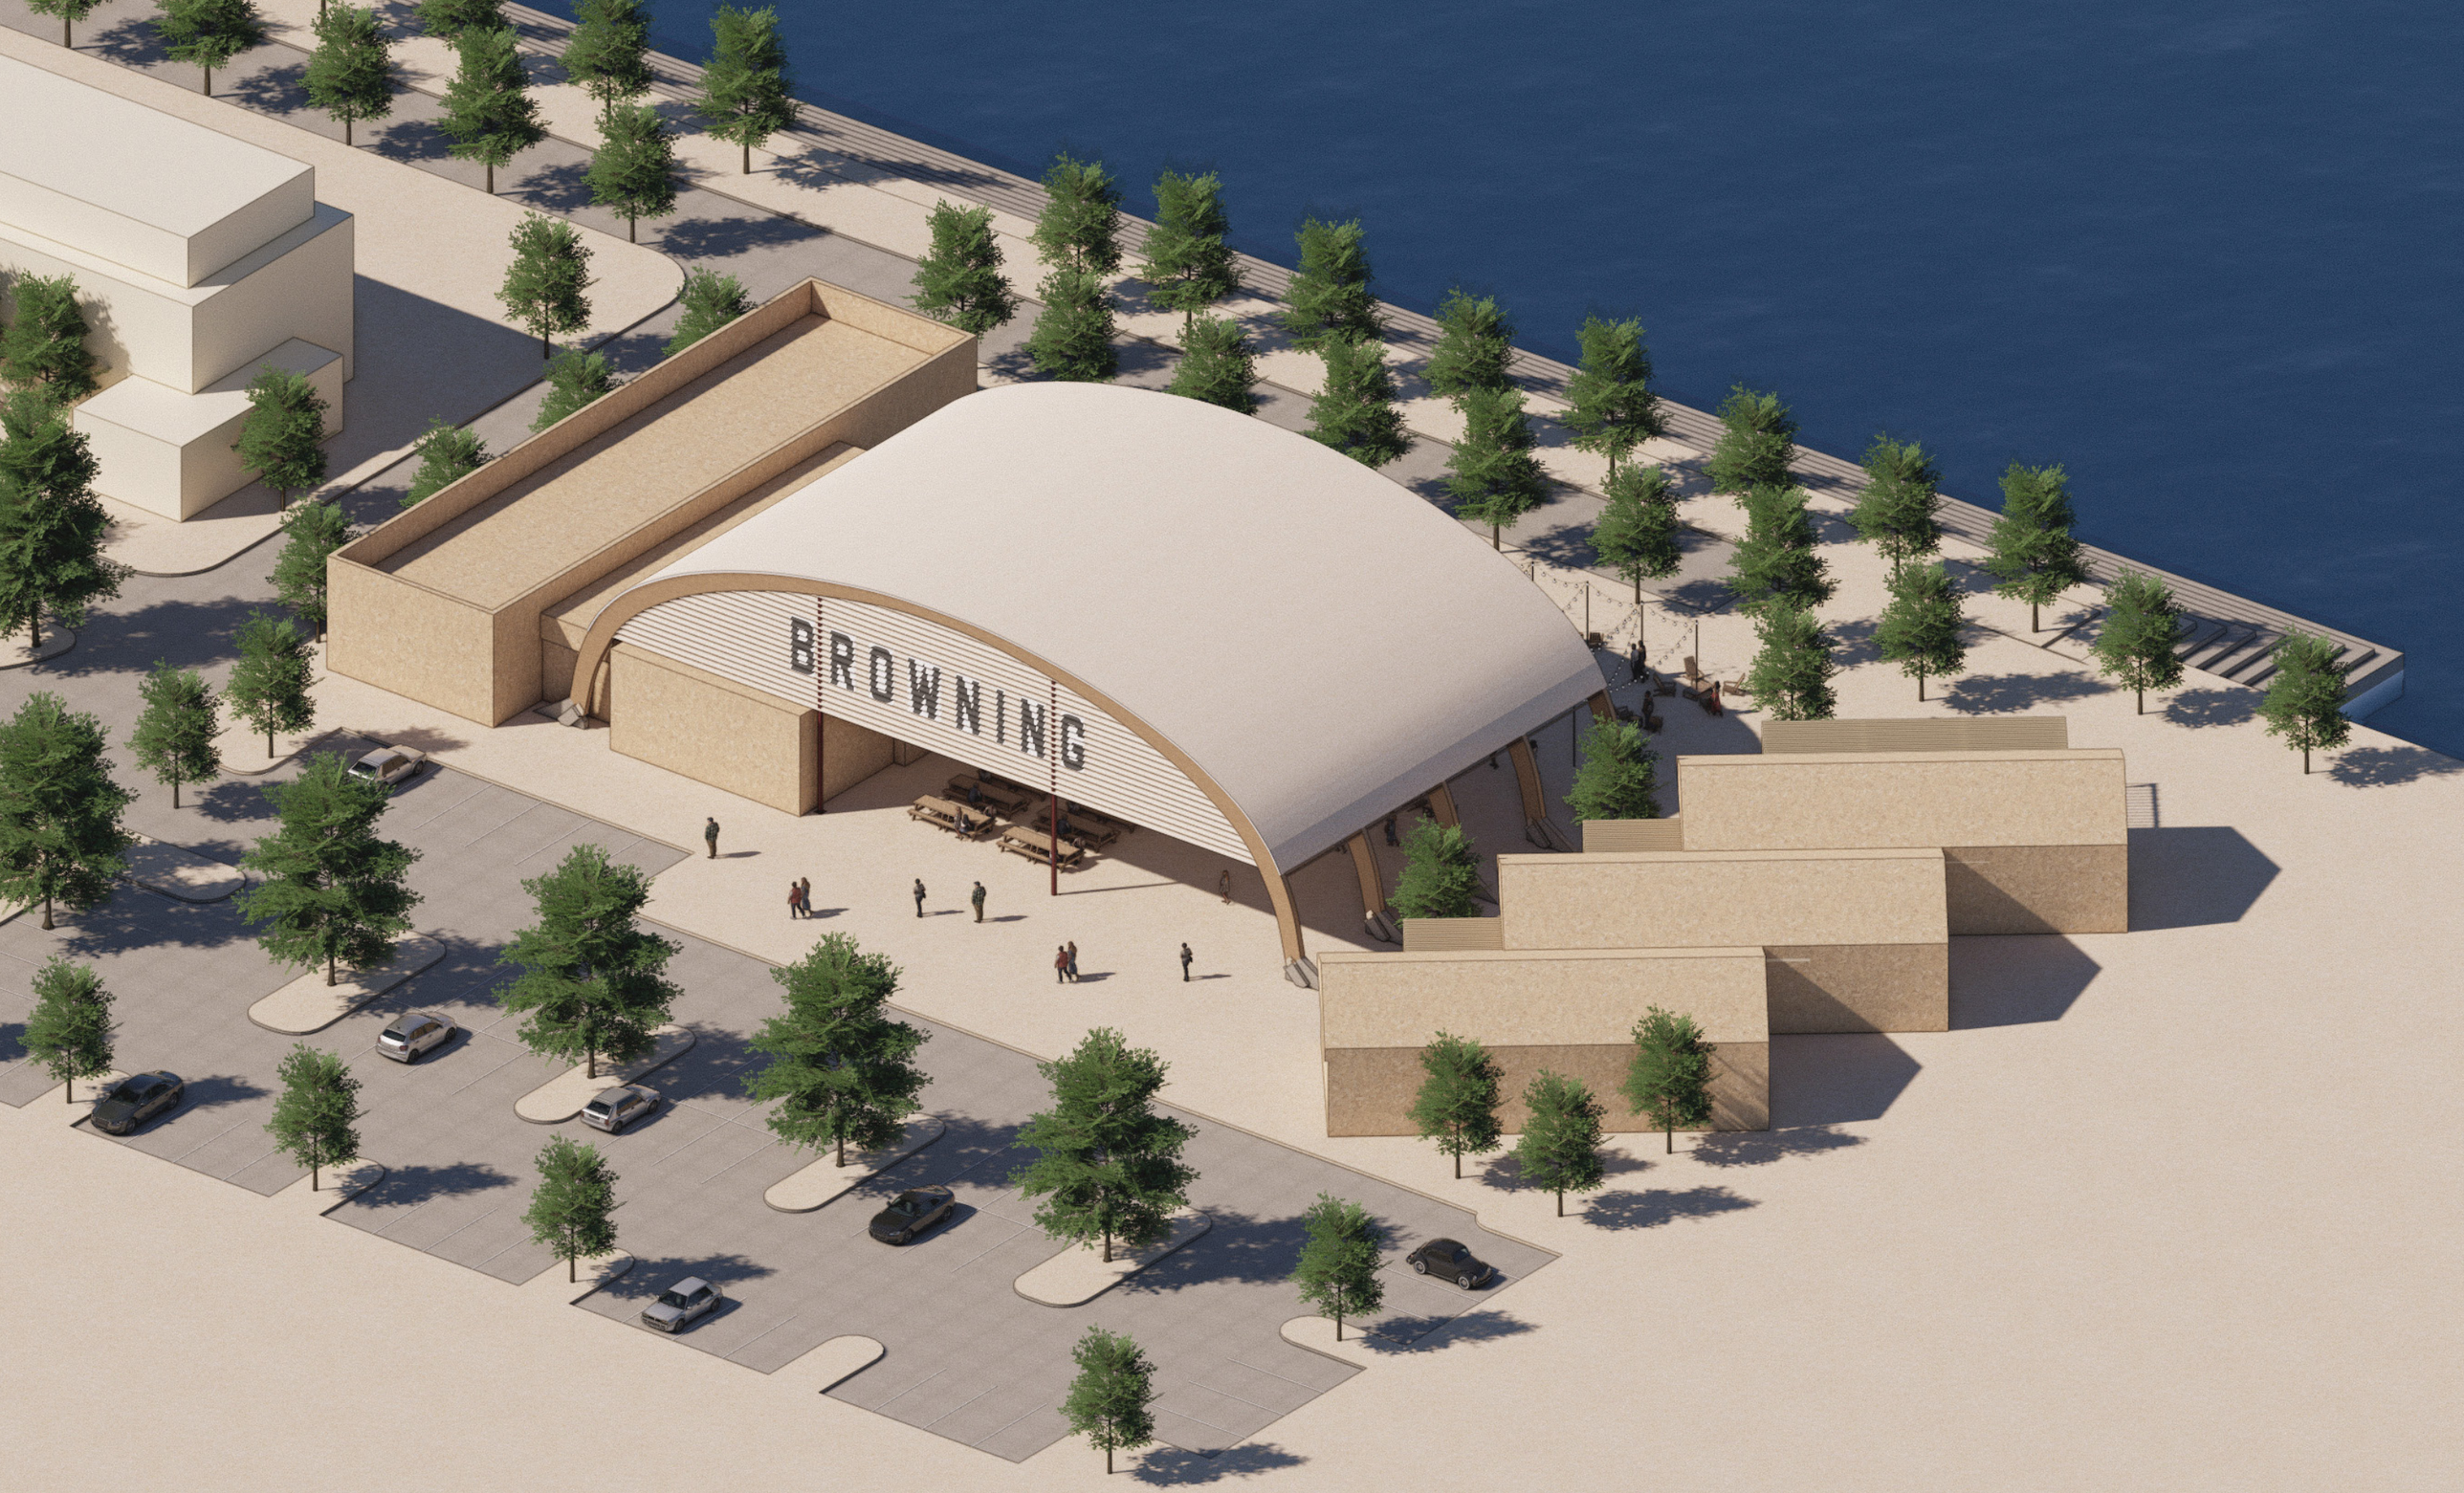

Reinforcing History

This scheme looks to the historic infrastructure of the original Mueller Airport and Browning Hangar to guide new interventions:

The addition to the Hangar structure mimics the placement & attachment of the offices or storage rooms of the original hangar (before the last demolition and restoration).

The structure added to the southern end of the site derives its form and orientation from the warehouse structures that were located to the south of the Browning Hangar.
